

KV-27TS20

RM-757

SERVICE MANUAL

US Model
Chassis No. SCC-A05P-A

Canadian Model
Chassis No. SCC-A50G-A

P-3A CHASSIS

Note: The service manual for RM-757 has been issued separately.

MODELS OF THE SAME SERIES

KV-27TS20	

SPECIFICATIONS

Television system	American TV standards
Channel coverage	VHF: 2-13 UHF: 14-69 Cable TV: 1-125
Picture tube	Microblack Trinitron tube 27-inch picture measured diagonally 28-inch picture tube measured diagonally
Input	VIDEO INPUT (phono jacks) Video: 1 Vp-p, 75-ohms unbalanced, sync negative Audio: 500 mVrms (100% modulation) Impedance: 47 kilohms
Output	AUDIO OUTPUT (VARIABLE) (phono jacks) More than 408 mVrms at the maximum volume setting (variable) (100% modulation) Impedance: 10 kilohms
Power requirements	120 V AC, 60 Hz
Power consumption	160W (max.) 5W (in standby condition)
Dimensions	Approx. 672 x 650 x 524.5 mm (w/h/d)
Weight	49Kg
Sound output	3W x 3W (music power)

Accessories supplied

Remote Commander RM-757
with 2 size AA batteries
Antenna connector

Optional accessories

U/V mixer EAC-66
Connecting cord VMC-810S/820S
RK-C74/150

Design and specifications subject to change without notice.

TRINITRON® COLOR TV
SONY®

WARNING !!

AN ISOLATION TRANSFORMER SHOULD BE USED DURING ANY SERVICE TO AVOID POSSIBLE SHOCK HAZARD, BECAUSE OF LIVE CHASSIS. THE CHASSIS OF THIS RECEIVER IS DIRECTLY CONNECTED TO THE AC POWER LINE.

SAFETY-RELATED COMPONENT WARNING !!

COMPONENTS IDENTIFIED BY SHADING AND MARK  ON THE SCHEMATIC DIAGRAMS, EXPLODED VIEWS AND IN THE PARTS LIST ARE CRITICAL TO SAFE OPERATION. REPLACE THESE COMPONENTS WITH SONY PARTS WHOSE PART NUMBERS APPEAR AS SHOWN IN THIS MANUAL OR IN SUPPLEMENTS PUBLISHED BY SONY. CIRCUIT ADJUSTMENTS THAT ARE CRITICAL TO SAFE OPERATION ARE IDENTIFIED IN THIS MANUAL. FOLLOW THESE PROCEDURES WHENEVER CRITICAL COMPONENTS ARE REPLACED OR IMPROPER OPERATION IS SUSPECTED.

ATTENTION!!

AFIN D'EVITER TOUT RISQUE D'ELECTROCUTION PROVENANT D'UN CHÂSSIS SOUS TENSION, UN TRANSFORMATEUR D'ISOLEMENT DOIT ETRE UTILISÉ LORS DE TOUT DÉPANNAGE. LE CHÂSSIS DE CE RÉCEPTEUR EST DIRECTEMENT RACCORDÉ À L'ALIMENTATION SECTEUR.

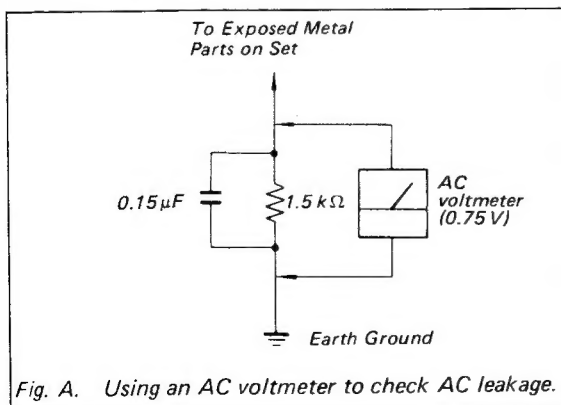

ATTENTION AUX COMPOSANTS RELATIFS À LA SÉCURITÉ!!

LES COMPOSANTS IDENTIFIÉS PAR UNE TRAME ET PAR UNE MARQUE  SUR LES SCHÉMAS DE PRINCIPE, LES VUES EXPLOSÉES ET LES LISTES DE PIÈCES SONT D'UNE IMPORTANCE CRITIQUE POUR LA SÉCURITÉ DU FONCTIONNEMENT. NE LES REMPLACER QUE PAR DES COMPOSANTS SONY DONT LE NUMÉRO DE PIÈCE EST INDIQUÉ DANS LE PRÉSENT MANUEL OU DANS DES SUPPLÉMENTS PUBLIÉS PAR SONY. LES RÉGLAGES DE CIRCUIT DONT L'IMPORTANCE EST CRITIQUE POUR LA SÉCURITÉ DU FONCTIONNEMENT SONT IDENTIFIÉS DANS LE PRÉSENT MANUEL. SUIVRE CES PROCÉDURES LORS DE CHAQUE REMPLACEMENT DE COMPOSANTS CRITIQUES, OU LORSQU'UN MAUVAIS FONCTIONNEMENT EST SUSPECTÉ.

SAFETY CHECK-OUT (US MODEL ONLY)

After correcting the original service problem, perform the following safety checks before releasing the set to the customer:

1. Check the area of your repair for unsoldered or poorly-soldered connections. Check the entire board surface for solder splashes and bridges.
2. Check the interboard wiring to ensure that no wires are "pinched" or contact high-wattage resistors.
3. Check that all control knobs, shields, covers, ground straps, and mounting hardware have been replaced. Be absolutely certain that you have replaced all the insulators.
4. Look for unauthorized replacement parts, particularly transistors, that were installed during a previous repair. Point them out to the customer and recommend their replacement.
5. Look for parts which, though functioning, show obvious signs of deterioration. Point them out to the customer and recommend their replacement.
6. Check the line cord for cracks and abrasion. Recommend the replacement of any such line cord to the customer.
7. Check the condition of the monopole antenna (if any).
Make sure the end is not broken off, and has the plastic cap on it. Point out the danger of impalement on a broken antenna to the customer, and recommend the antenna's replacement.
8. Check the B+ and HV to see they are at the values specified. Make sure your instruments are accurate; be suspicious of your HV meter if sets always have low HV.
9. Check the antenna terminals, metal trim, "metallized" knobs, screws, and all other exposed metal parts for AC leakage. Check leakage as described below.

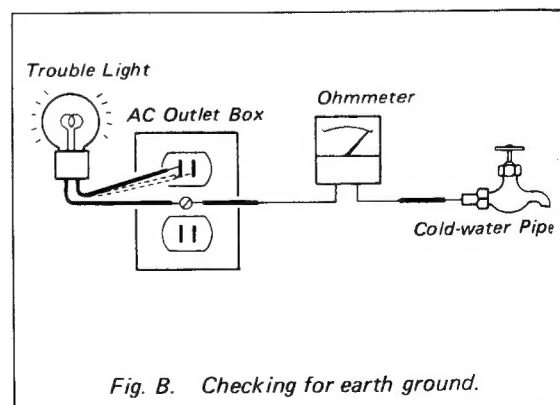

LEAKAGE TEST

The AC leakage from any exposed metal part to earth ground and from all exposed metal parts to any exposed metal part having a return to chassis, must not exceed 0.5 mA (500 microamperes). Leakage current can be measured by any one of three methods.

1. A commercial leakage tester, such as the Simpson 229 or RCA WT-540A. Follow the manufacturers' instructions to use these instruments.
2. A battery-operated AC milliammeter. The Data Precision 245 digital multimeter is suitable for this job.
3. Measuring the voltage drop across a resistor by means of a VOM or battery-operated AC voltmeter. The "limit" indication is 0.75 V, so analog meters must have an accurate low-voltage scale. The Simpson 250 and Sanwa SH-63Trd are examples of a passive VOM that is suitable. Nearly all battery operated digital multimeters that have a 2 V AC range are suitable. (See Fig. A)

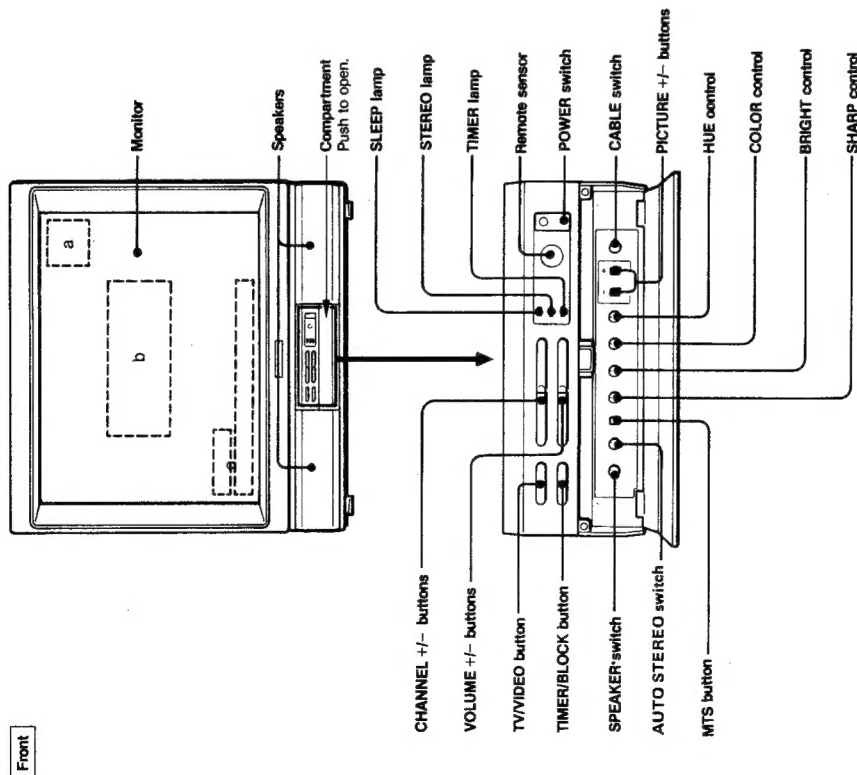

HOW TO FIND A GOOD EARTH GROUND

A cold-water pipe is guaranteed earth ground; the cover-plate retaining screw on most AC outlet boxes is also at earth ground. If the retaining screw is to be used as your earth-ground, verify that it is at ground by measuring the resistance between it and a cold-water pipe with an ohmmeter. The reading should be zero ohms. If a cold-water pipe is not accessible, connect a 60–100 watts trouble light (not a neon lamp) between the hot side of the receptacle and the retaining screw. Try both slots, if necessary, to locate the hot side of the line, the lamp should light at normal brilliance if the screw is at ground potential. (See Fig. B)

SECTION 1 GENERAL

1-1. LOCATION OF CONTROLS

On-screen displays

- Channel numbers
- MTS mode indication
- "MUTING", "SLEEP" or "VIDEO" mode indication
- "AUTO PROGRAM", "TIMER" or "TIMER BLOCK" indication
- Bar display for volume or picture adjustment
- Current time for Timer/Block

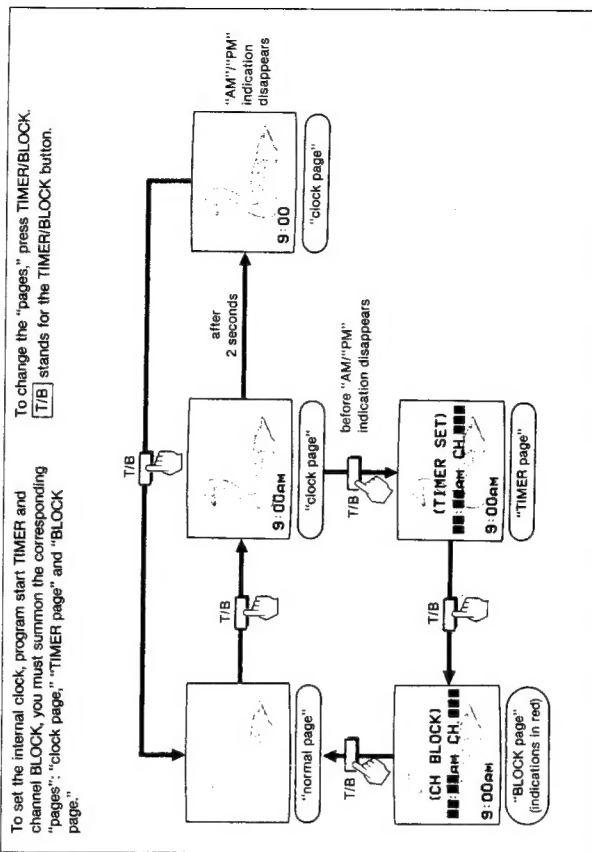

1-2. TIMER/BLOCK

Available functions

Internal clock	Once the internal clock is set, the current time will appear on the screen. It is necessary to set the clock correctly to activate the program start TIMER and BLOCK.
Program start TIMER	Makes a program of your choice appear on the screen automatically at the desired time.
Channel BLOCK	Blocks a channel from appearing on the screen for 12 hours. Use channel BLOCK to prevent children from watching undesirable programs.

The buttons used for the above functions are located on the Remote Commander.

To set the internal clock, program start TIMER and channel BLOCK, you must summon the corresponding "pages": "clock page", "TIMER page" and "BLOCK page".

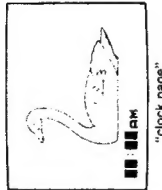

- All settings will be erased from the unit's memory if the unit is unplugged, or if a power failure occurs.
- The TIMER and BLOCK will operate only if the clock is set correctly.
- If the TIMER and BLOCK are set for overlapping times on the same channel, the blocked channel will appear on the screen at the time set on the TIMER.

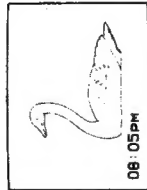

How to Set the Internal Clock

Example: To set the clock to 8:05 PM

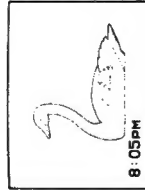

- 1 Press **TIMER/BLOCK** once to change from "normal page" to "clock page."

- 2 Press 0, 8, 0, 5, **AM/PM** (if necessary).

- 3 If you have performed the operation correctly, press **ENTER**. The numbers will "wink" to indicate that the clock has been set. (The 0 in front will disappear.)

If you have made a mistake, press **CLEAR** and return to step 2.

The "AM/PM" indication will disappear after 2 seconds.

To summon "TIMER page," press **TIMER/BLOCK** before the "AM/PM" indication disappears. To return to "normal page," press **TIMER/BLOCK** after the "AM/PM" indication has disappeared.

To reset the clock, summon "clock page" and press **CLEAR** before the "AM/PM" indication disappears. Then follow the steps above from step 2.

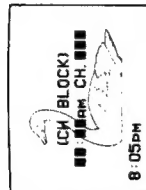

12:00 AM stands for midnight.
12:00 PM stands for noon.

How to Set the Channel BLOCK

Example: Make sure that the clock has been set correctly before setting the channel BLOCK.

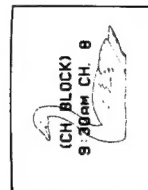

Example: To set the BLOCK for a program which begins at 9:30 AM on channel 8

- 1 Press **TIMER/BLOCK** three times to change from "normal page" to "BLOCK page."

"BLOCK page" (indications in red)

- 2 Press 0, 9, 3, 0, **ENTER** (if necessary). Numbers will "wink" to indicate that the time has been set. Press 8, **ENTER** (if not necessary). Numbers will "wink" to indicate that the channel has been set.

The BLOCK has now been set. If you have made a mistake, press **CLEAR** and return to step 2.

At the preset time, the picture of the selected channel will be blocked from view and the sound will be muted. A red "BLOCKED" indication will appear on the screen while the channel is blocked. Normal reception will be resumed after 12 hours.

To return to normal reception while the channel is blocked, recall "BLOCK page" and press **CLEAR**.

The BLOCK setting blocks a specified channel for the same 12-hour period everyday.

To clear BLOCK setting, summon "BLOCK page" and press **CLEAR**.

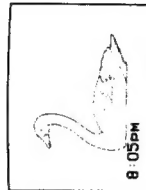

To reset, clear the setting and follow the steps above from step 2.

How to Set the Program Start TIMER

Make sure that the clock has been set correctly before setting the program start TIMER.

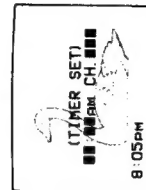

Example: To set the TIMER for a program which begins at 10:30 PM on channel 12

- 1 Press **TIMER/BLOCK** once to change from "normal page" to "clock page."

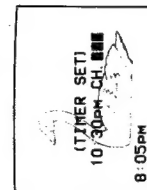

"clock page"

- 2 Press **TIMER/BLOCK** before the "AM/PM" indication disappears and summon "TIMER page."

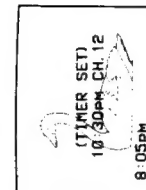

"TIMER page"

- 3 Press 1, 0, 3, 0, **AM/PM**, **ENTER**. Numbers will "wink" to indicate that the time has been set.

- 4 Press 1, 2, **ENTER** (if not necessary). Numbers will "wink" to indicate that the channel has been set.

If you want to deactivate the TIMER, press **TIMER OFF/REPEAT** again so that the TIMER lamp goes out. It is not necessary to summon "TIMER page" to use the **TIMER OFF/REPEAT** button. Furthermore, this button is effective even if the TV has been turned off.

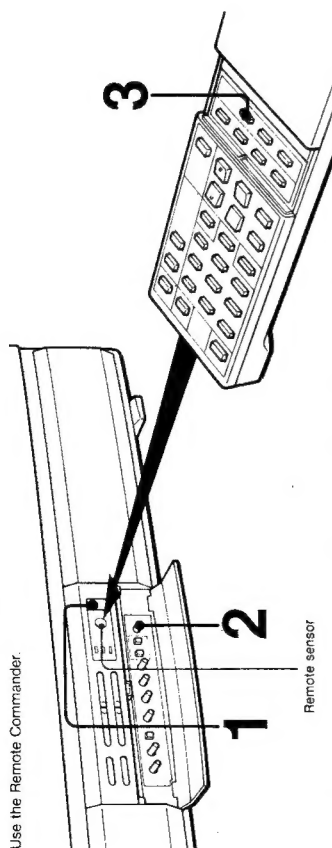

To clear the TIMER setting, summon "TIMER page" and press **CLEAR**.

To reset, clear the setting and follow the steps from step 3.

The TIMER operates only once, but the time and the channel will remain in the unit's memory. If you want to preset the same channel at the same time for a future date, press **TIMER OFF/REPEAT**. The TIMER lamp will light up to indicate that the TIMER has been reactivated.

1-3. PRESETTING TV CHANNELS

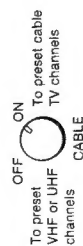

Use the Remote Commander.

1 Turn the TV on.

2 Set CABLE to the correct position.

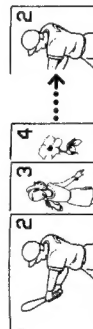

3 Press AUTO PROG.

"AUTO PROGRAM" is displayed on the screen and receivable channels (other than the channels already preset) will be preset in numerical sequence. The channels previously preset remain in the unit's memory.

When no more channels can be found, the programming stops and the lowest numbered channel is displayed.

Receivable channels of this TV are:

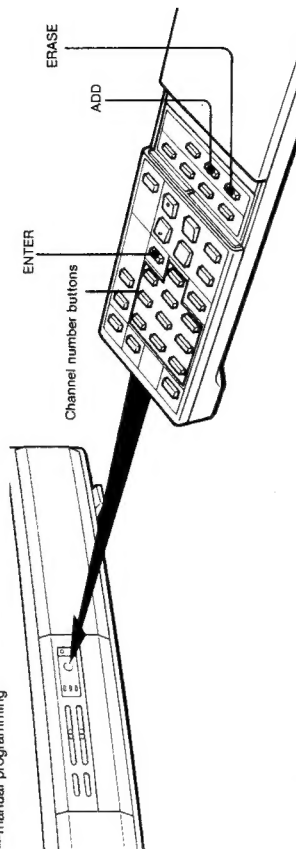

VHF: 2-13
UHF: 14-69
Cable: 1-125

To check preset channels
Press CHANNEL +/-.

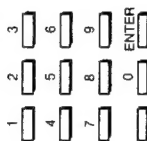

To add the channels that could not be preset with this automatic programming because their signal strength was too weak, or to erase unnecessary channels, follow the steps in "To preset only the desired channels" on the next page.

To add the channels that could not be preset with this automatic programming because their signal strength was too weak, or to erase unnecessary channels, follow the steps in "To preset only the desired channels" on the next page.

To preset only the desired channels
--manual programming

1 Press the channel number button(s) and then ENTER to select the channel to be added.

2 Press ADD.

A "+" appears for a moment to the left of the on-screen channel number display. This channel has now been added to the channel scan memory.

To add other channels Repeat steps 1 to 2.

To erase unnecessary channels
1 Select the channel to be erased.

2 Press ERASE.
A "-" appears for a moment to the left of the on-screen channel number display. This channel has now been erased from the channel scan memory.

Repeat steps 1 and 2 for other channels to be erased.

When a VHF or UHF channel is erased

The cable TV channel with the same number is also erased and vice versa.

Pay cable TV systems use scrambled or encoded signals and require special converters (decoders) in addition to the normal cable connection.

Cable TV channel chart*

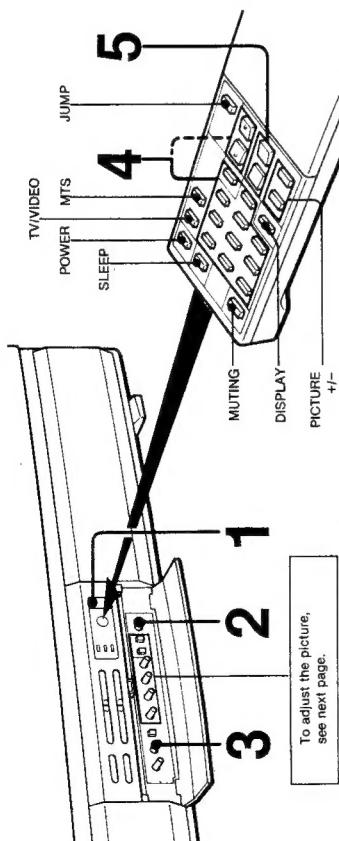

Cable TV systems use letters or numbers to designate channels. To tune in a channel, refer to the chart below.

Number on this TV	1	5	6	14	15	16	17	18	19	20	21	22	23	24	25	26	27	28	29	30
Corresponding CATV channel	A-6	A-7	A-8	A	B	C	D	E	F	G	H	I	J	K	L	M	N	O	P	Q

Check with your local cable TV company for more complete information on the available channels.

*The designation of the cable TV channels conforms to the EIA/NTCA recommendation.

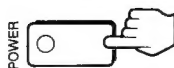

1-4. WATCHING TV PROGRAMS

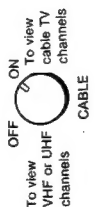

To adjust the picture

SHARP for more sharpness for less sharpness	BRIGHT for more brightness for less brightness	COLOR for more color for less color	HUE skin tones become purplish skin tones become greenish	PICTURE Press to increase picture contrast with vivid color Press to decrease picture contrast with soft color
--	---	--	--	---

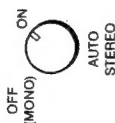

1 Press POWER to turn the TV on.

2 Set CABLE to the appropriate position.

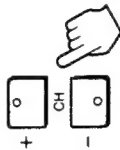

3 Set AUTO STEREO to ON.

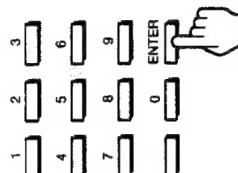

4 Select a channel in one of the following two ways:

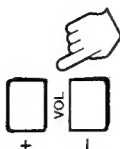

To scan the preset channels in numerical sequence, press CH +/-.

To select a channel directly, press the channel number button(s) and then ENTER. For example, to select channel 10, press 1, 0 and ENTER.

5 Press VOL + or - to adjust the volume.

When receiving a Multichannel TV Sound program
Each time MTS is pressed, MAIN, SAP (Second Audio Program), or both are selected in sequence. The corresponding indication will appear on the screen for a while.

If noise makes it hard to receive a very weak TV stereo program
Set AUTO STEREO on the TV to OFF so that the STEREO lamp goes off.
The stereo effect will be cancelled, but reception will be stabilized and the noise will be reduced.

To mute the sound
Press MUTING. The "MUTING" indication will appear on the screen. To restore the sound, press MUTING again or VOL +/-.

To keep the channel display on the screen
Press DISPLAY.

To switch quickly between 2 channels
Press JUMP. Each time JUMP is pressed, the channel which appeared on the screen directly before is recalled. This button enables you to keep track of two programs alternately.

To have the TV turn off automatically after about 1 hour
Press SLEEP. The "SLEEP" indication will appear on the screen for a few seconds and the SLEEP lamp on the TV will remain lit until the TV is turned off.

To cancel the SLEEP timer, press SLEEP again so that the SLEEP lamp goes out, or turn off the TV.

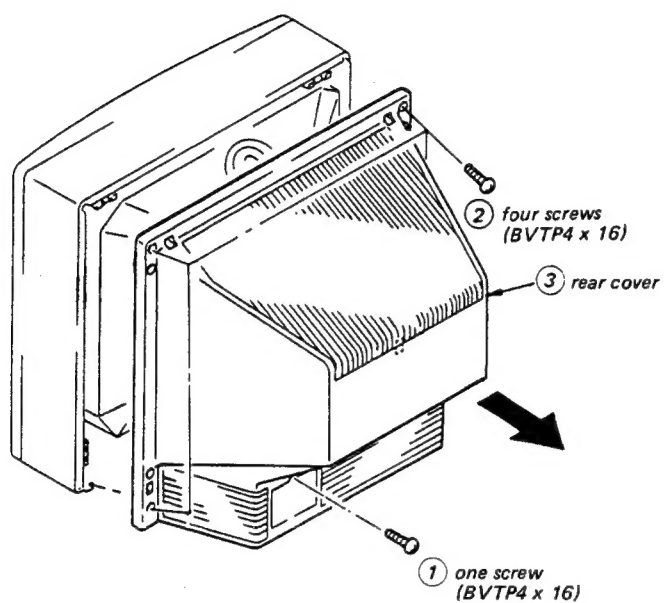

To turn off the system
Press POWER again.

SECTION 2

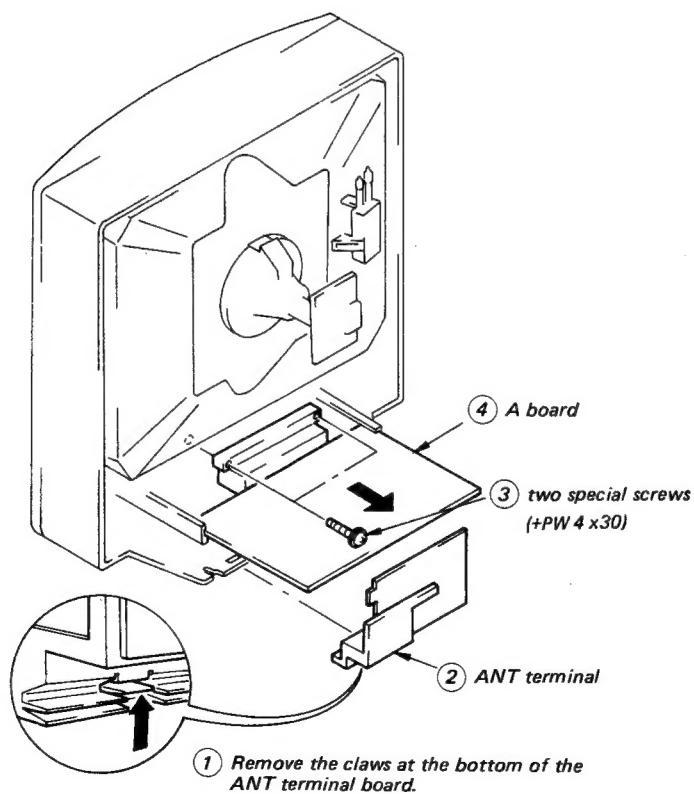

DISASSEMBLY

2-1. REAR COVER REMOVAL

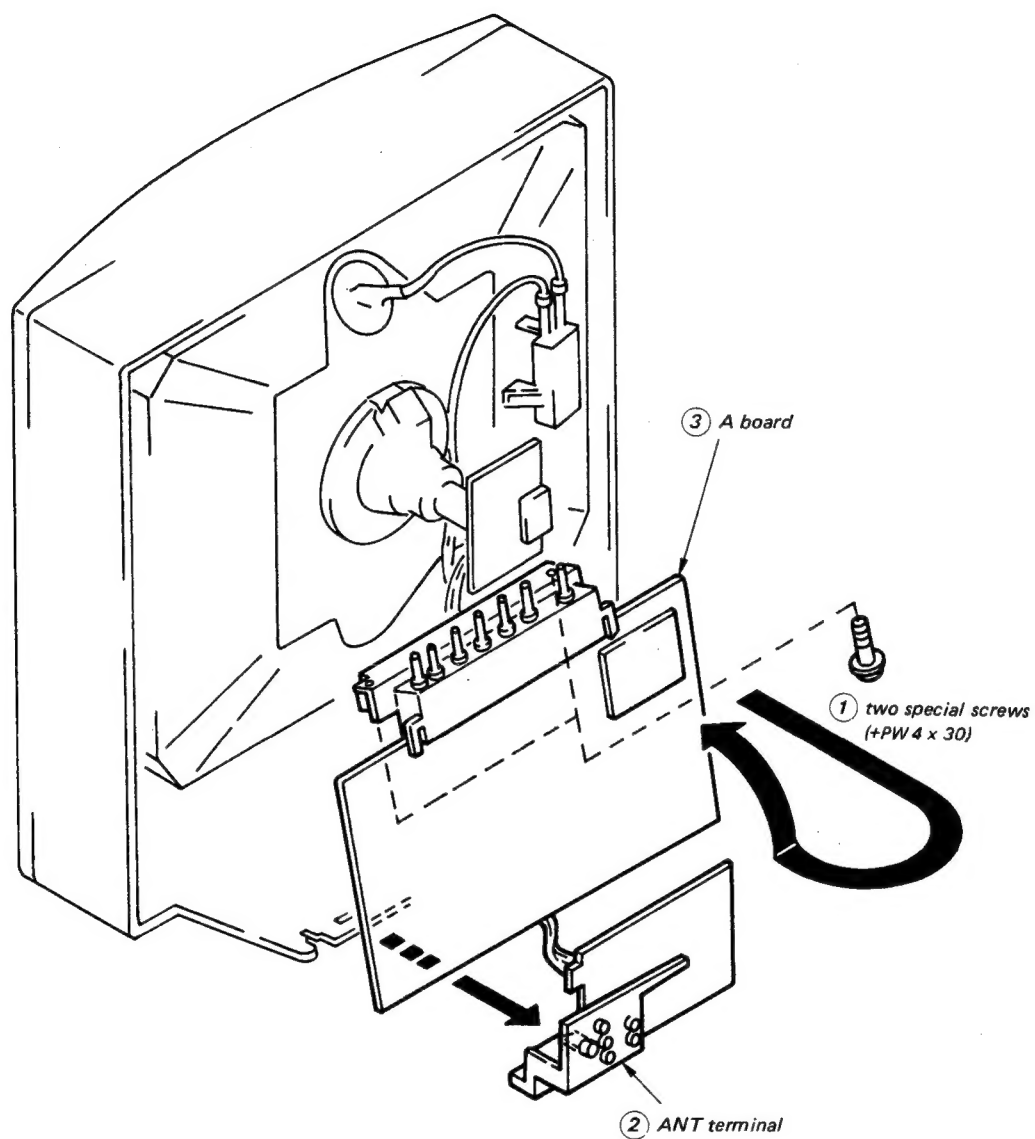

Note: In case a REAR COVER HOLDER is broken, secure the REAR COVER using a cross-head BVTP4 x 16 screw.

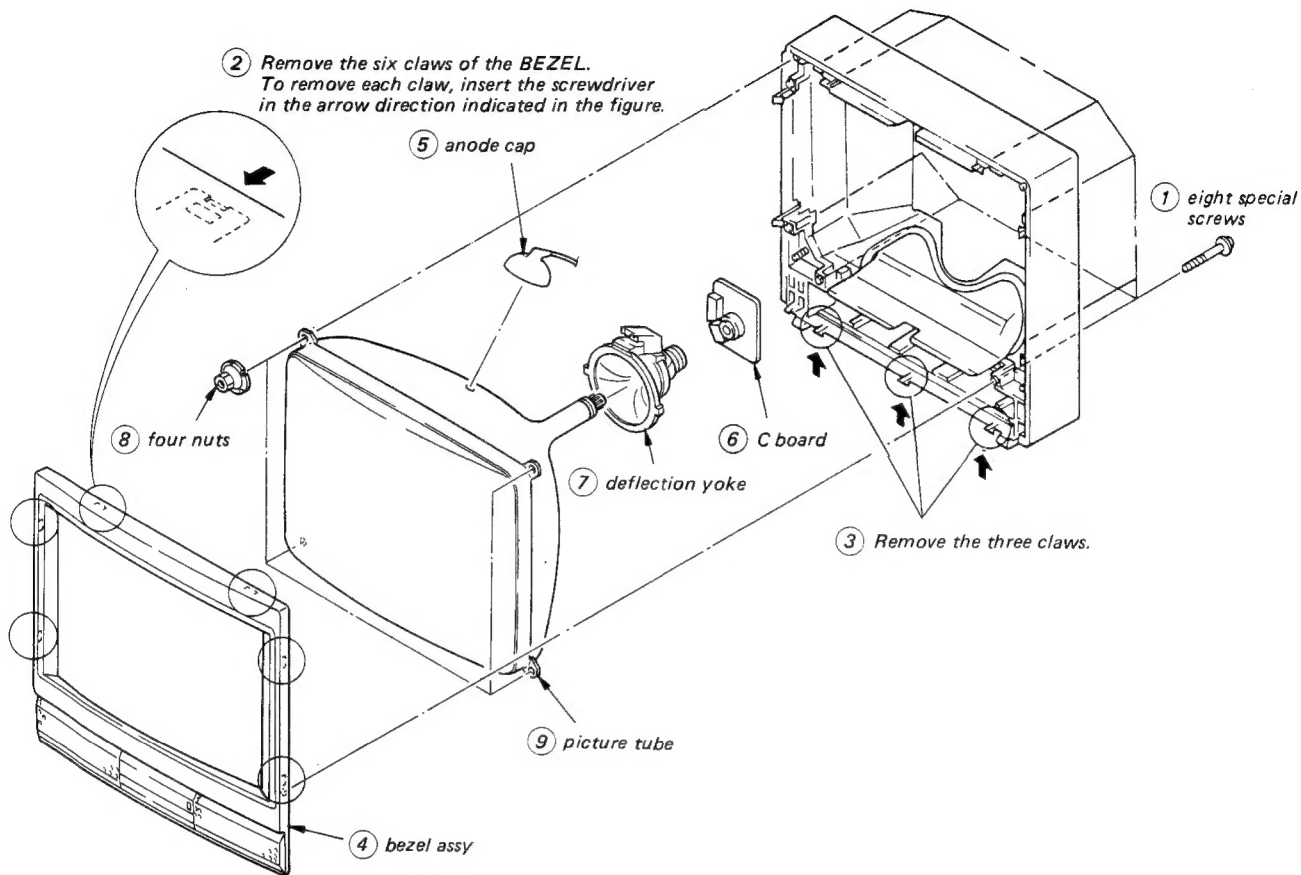

2-2. A BOARD REMOVAL

2-3. SERVICE POSITION

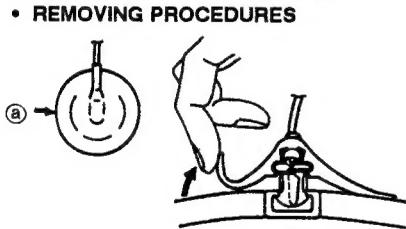

2-4. PICTURE TUBE REMOVAL

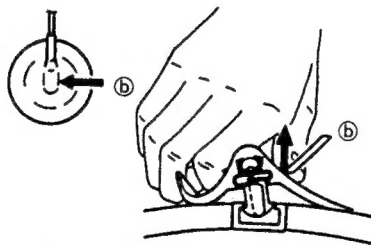

2-5. REMOVAL OF ANODE CAP

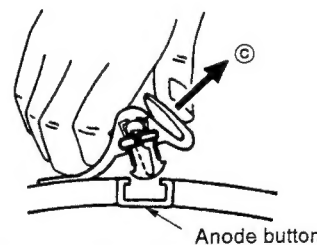

• REMOVAL OF ANODE-CAP • REMOVING PROCEDURES

① Turn up one side of the rubber cap in the direction indicated by the arrow (a).

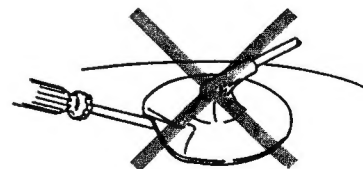

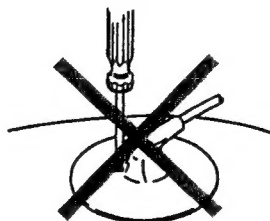

② Using a thumb pull up the rubber cap firmly in the direction indicated by the arrow (b).

③ When one side of the rubber cap is separated from the anode button, the anode-cap can be removed by turning up the rubber cap and pulling up it in the direction of the arrow (c).

• HOW TO HANDLE AN ANODE-CAP

- ① Don't hurt the surface of anode-caps with sharp shaped material !
- ② Don't press the rubber hardly not to hurt inside of anode-caps !
A metal fitting called as shatter-hook terminal is built in the rubber.
- ③ Don't turn the foot of rubber over hardly !
The shatter-hook terminal will stick out or hurt the rubber.

SECTION 3

SET-UP ADJUSTMENTS

- The following adjustments should be made when a complete realignment is required or a new picture tube is installed.
- These adjustments should be performed with rated power supply voltage unless otherwise noted.

Controls and switch should be set as follows unless otherwise noted:

PICTURE control RESET

BRIGHTNESS control center

Perform the adjustments in order as follows:

1. Beam Landing
2. Convergence
3. Focus
4. White Balance

Note: Test Equipment Required.

1. Color-bar/Pattern Generator
2. Degausser

3-1. BEAM LANDING

Preparation:

- Feed in the white pattern.
 - Before starting, degauss the entire screen.
1. Turn on set power supply and receive an all-white signal.
 2. Evenly degauss the entire screen.
 3. Loosen the deflection yoke mounting screw, and set the purity control to the center as shown in Figure 3-1.
 4. Set BKG VR **R** to maximum and set **B** and **G** to minimum.
 5. Move the deflection yoke back, and adjust the purity control so that **R** is in the center and **G** and **B** are at the sides, evenly. (Figure 3-2.)
 6. Move the deflection yoke forward so that the entire screen is red.
 - * If the deflection yoke is pushed all the way to the CRT then moved slightly back, landing adjustment is easier.
 7. Substitute **G**, then **B** for **R** in step 4 and check landing.
 8. Rotate **R**, **G** and **B** once each and check landing.
 9. When landing is not right, adjust the purity control and use magnets as shown in Figure 3-3. then repeat steps 7 and 8.
 10. When a magnet is used, be sure to perform step 2, and tighten deflection yoke mounting screw loosely.

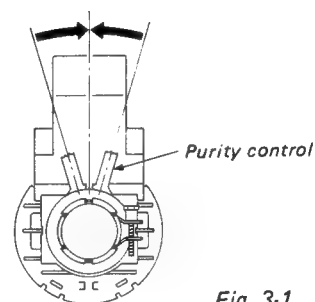

Fig. 3-1.

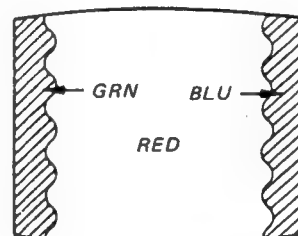

Fig. 3-2.

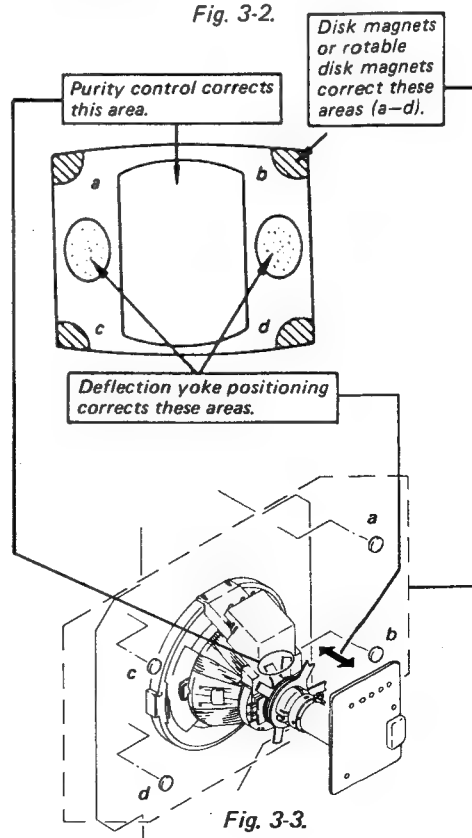

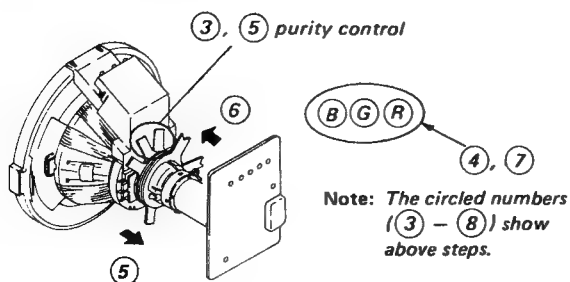

Fig. 3-3.

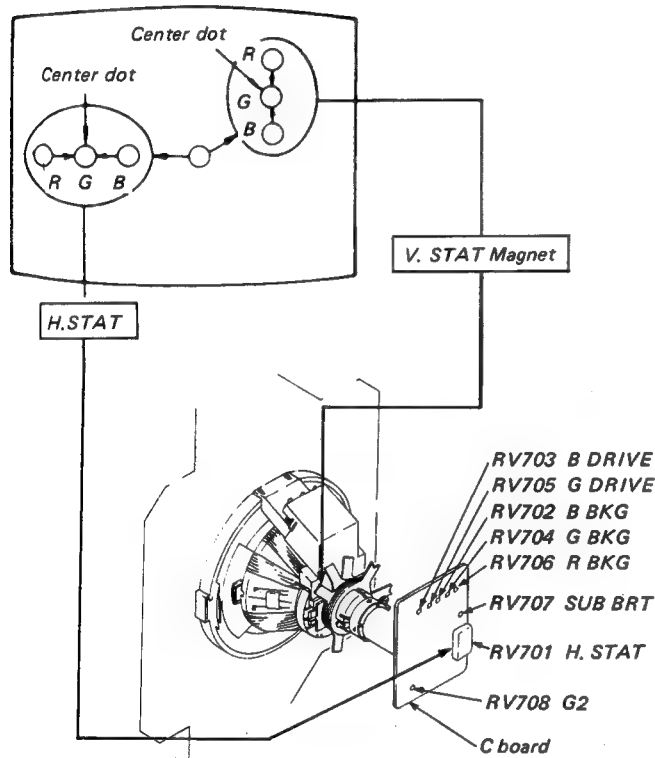

3.2. CONVERGENCE

Preparation:

- Before starting, perform FOCUS, H. SIZE, V. SIZE and V. LIN adjustments.
- Set BRIGHTNESS control to fully counterclockwise.
- Feed in the dot pattern.

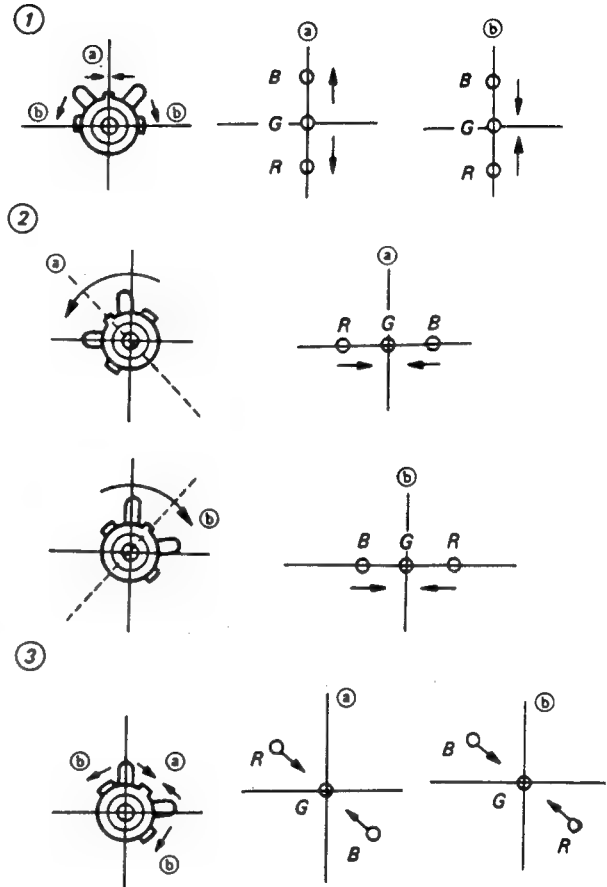

(1) Horizontal and Vertical Static Convergence

1. Adjust H. STAT VR to coincide red, green and blue dots on the center of screen (Horizontal movement)
 2. Adjust V. STAT magnet to coincide red, green and blue dots on the center of screen (Vertical movement)
 3. If the red, green and blue dots do not coincide on the center of screen with H. STAT VR, perform horizontal convergence adjustment using H. STAT VR and V. STAT magnet as shown below. (In this case, H. STAT VR and V. STAT magnet effect each other.)
- Tilt the V. STAT magnet and adjust static convergence to open or close the V. STAT magnet.

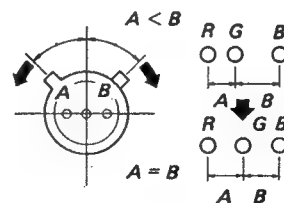

4. When the V. STAT magnet is moved in the direction of arrow (a) and (b), Red, Green and Blue dots move as shown below.

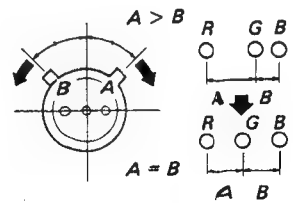

• HMC and VMC correction for Hexapole Magnet.

1. HMC (Horizontal, Mis. convergence) correction and motion of the Electron Beam with the Hexapole Magnet.

HMC correction (A)

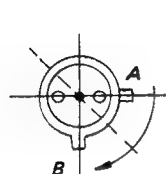

HMC correction (B)

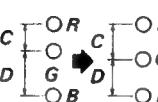

2. VMC (Vertical, Mis, convergence) correction and motion of the Electron Beam with the Hexapole Magnet.

VMC correction (A)

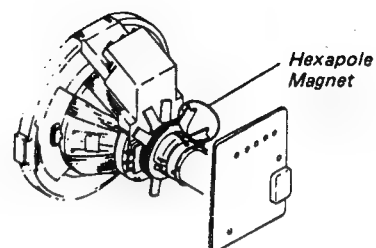

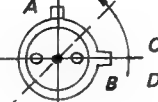

$C < D$ $C = D$

VMC correction (B)

$C > D$ $C = D$

(2) Dynamic Convergence Adjustment

Preparation:

- Before starting, perform Horizontal and Vertical Static Convergence Adjustment.

 1. Loosen deflection yoke screw.
 2. Remove deflection yoke spacers.
 3. Move the deflection yoke for best convergence as shown in Fig. 7.
 4. Tighten the deflection yoke screw.
 5. Install the deflection yoke spacers.

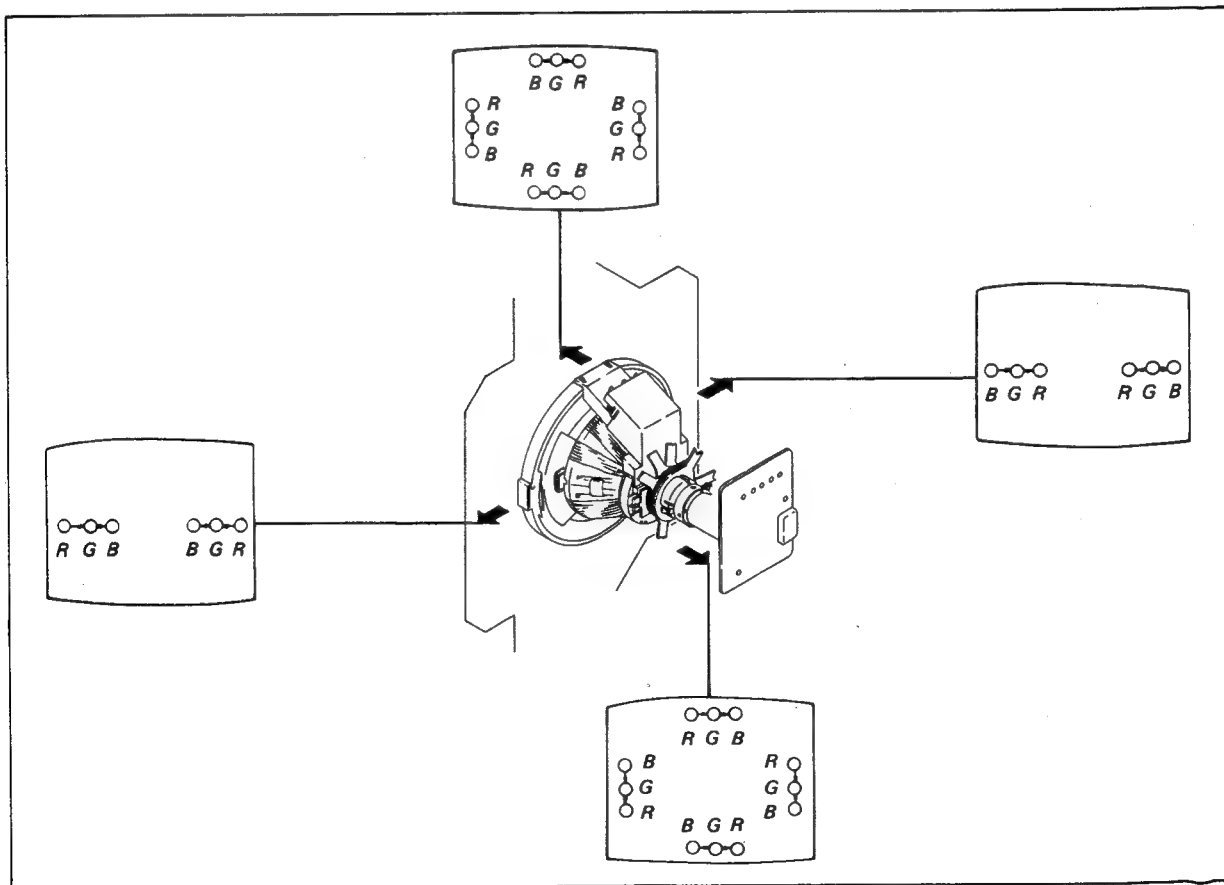

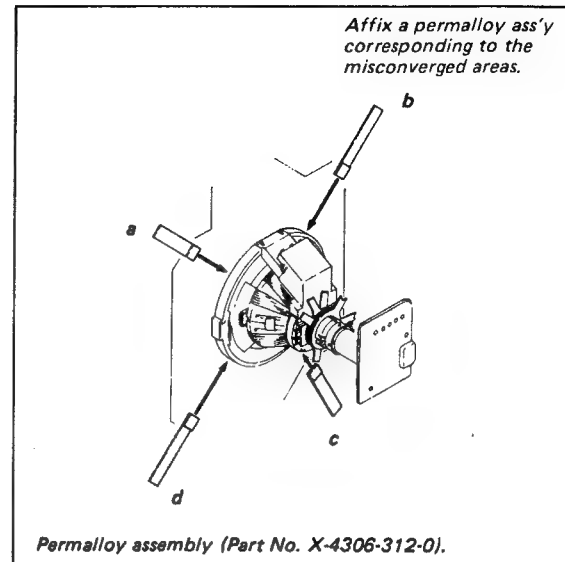

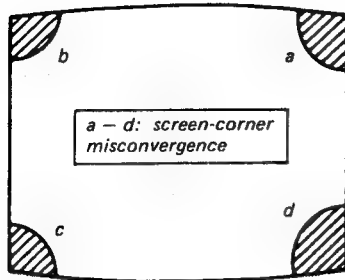

Fig. 7

(3) Screen-corner Convergence

3-3. FOCUS ADJUSTMENT

Adjust FOCUS control on the flyback transformer for a best focus.

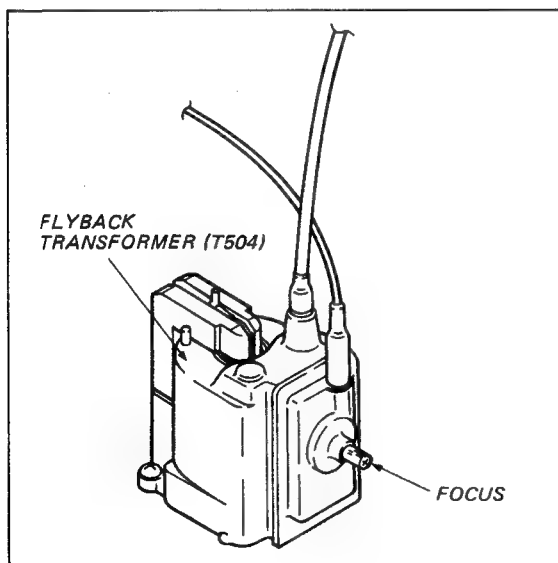

Fig. 15

3-4. WHITE BALANCE

Feed in the cross-hatch pattern.

1. Set the PICTURE and BRIGHT controls to minimum position (fully counterclockwise).
2. Turn B. DRIVE and G. DRIVE controls fully clockwise.
3. Set B. BKG, G. BKG and R. BKG controls to mechanical center.
4. Turn SCRN control slowly to obtain a faintly visible cross-hatch. Note the color that first becomes visible by turning SCRN control. Do not turn a BKG control for this color.
5. Adjust the other two BKG controls for best white balance (neutral gray) of the faint cross-hatch.
6. Set the PICTURE and BRIGHTNESS controls to maximum position (fully clockwise). Observe the screen and adjust the DRIVE controls for best white balance.
7. Repeat Steps 1 through 6 several times.

H CENT ADJUSTMENT (A-18)

1. Receive a cross-hatch signal.
2. Set PICTURE and BRIGHT to normal.
3. Adjust H.CENT (H.CENT TAP = A-18) for best picture.

BALANCE ADJUSTMENT (RV291)

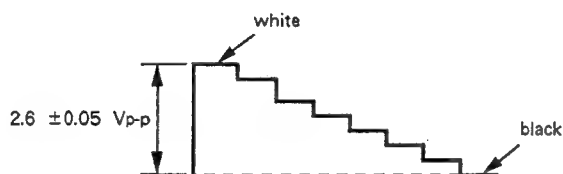

1. Receive 400 Hz (100 % modulation) sound signal.
2. Sound volume 80 %
3. Connect an oscilloscope to the pin ① and pin ② of A-7 connector.
4. Adjust RV291 (BALANCE) to be the same level.

V.CENT ADJUSTMENT (S501)

1. Receive a cross-hatch signal.
2. Set PICTURE and BRIGHT to normal.
3. Adjust V.CENT (S501) and V.SIZE (RV507) for best picture.

SUB CONTRAST ADJUSTMENT (RV307)

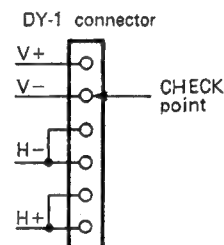

1. Receive a color-bar signal.
 PICTURE MAX
 BRIGHT CENTER
 COLOR MIN
 SHARP MIN
2. Short circuit between Base of Q354 and 9.3V Line with a jumper wire.
3. Draw A-8 connector. (Short circuit R352.)
4. Connect an oscilloscope to the pin ④ of A-8 connector (blue out).
5. Adjust RV307 (SUB CONT) so that voltage is 2.6 ± 0.05 Vp-p.

H.RREQ ADJUSTMENT (RV501)

1. Receive an off-air signal.
2. Short circuit between pin ④ of IC301 (H IN) and pin ⑤ of IC301 (VCC 2) with a jumper wire.
3. Connect the frequency counter across Base of Q550 and ground.
4. Adjust RV501 for $15,734 \text{ kHz} \pm 50 \text{ Hz}$ on the frequency counter.
5. Disconnect a jumper wire from IC301.

V.FREQ ADJUSTMENT (RV502)

1. Receive an off-air signal.
2. Short circuit between pin ④ of IC301 (V IN) and pin ⑤ of IC301 (VCC 2) with a jumper wire.
3. Connect the frequency counter across DY-1 connector (V.DY ①) and ground.
4. Adjust RV502 for $55.0 \pm 0.3 \text{ Hz}$ on the frequency counter.
5. Disconnect a jumper wire from IC301.

CHARACTER POSITION (T101)

1. Receive a color-bar signal.
2. Set the PICTURE control to maximum setting and set the BRIGHT control to center click position.
3. Press the PICTURE control button until this picture level becomes maximum.
4. Adjust T101 as shown in Fig. 1.

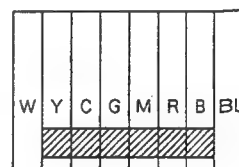

Fig. 1

PICTURE BLANKING CONFIRMATION

The following adjustments should always be performed when replacing the following components.

Regarding components of *R388.

IC301, D506, R341, R344, R378, R379, R380, R382, R383, PM501

1. Connect the variable auto-transformer to AC line and turn the POWER switch ON.
2. Receive monoscope signal.
3. Set the PICTURE control in to 80 % and the BRIGHT control to center click position.
4. Connect the digital voltmeter to TP91 (135V : A-14 connector).
5. Connect the AC voltmeter to A-10 connector.
6. Slowly decrease the AC power supply voltage by the variable auto-transformer and confirm that the picture is blanked when the voltage at TP91 is more than 107.5 Vdc.

V.SIZE CONFIRMATION

The following adjustments should always be performed when replacing the following components.

Regarding components of ※R555 (V.SIZE).

DY, IC301, R514, R515, R555, R556, T504, RV507

1. Turn the POWER switch ON, and receive monoscope signal.
2. Set the PICTURE control in to 80 % and the BRIGHT control to center click position.
3. Adjust RV507 (V.SIZE) so that the V.SIZE becomes minimum, and confirm that the raster size is 29 cm or more.

H.SIZE CONFIRMATION

The following adjustments should always be performed when replacing the following components.

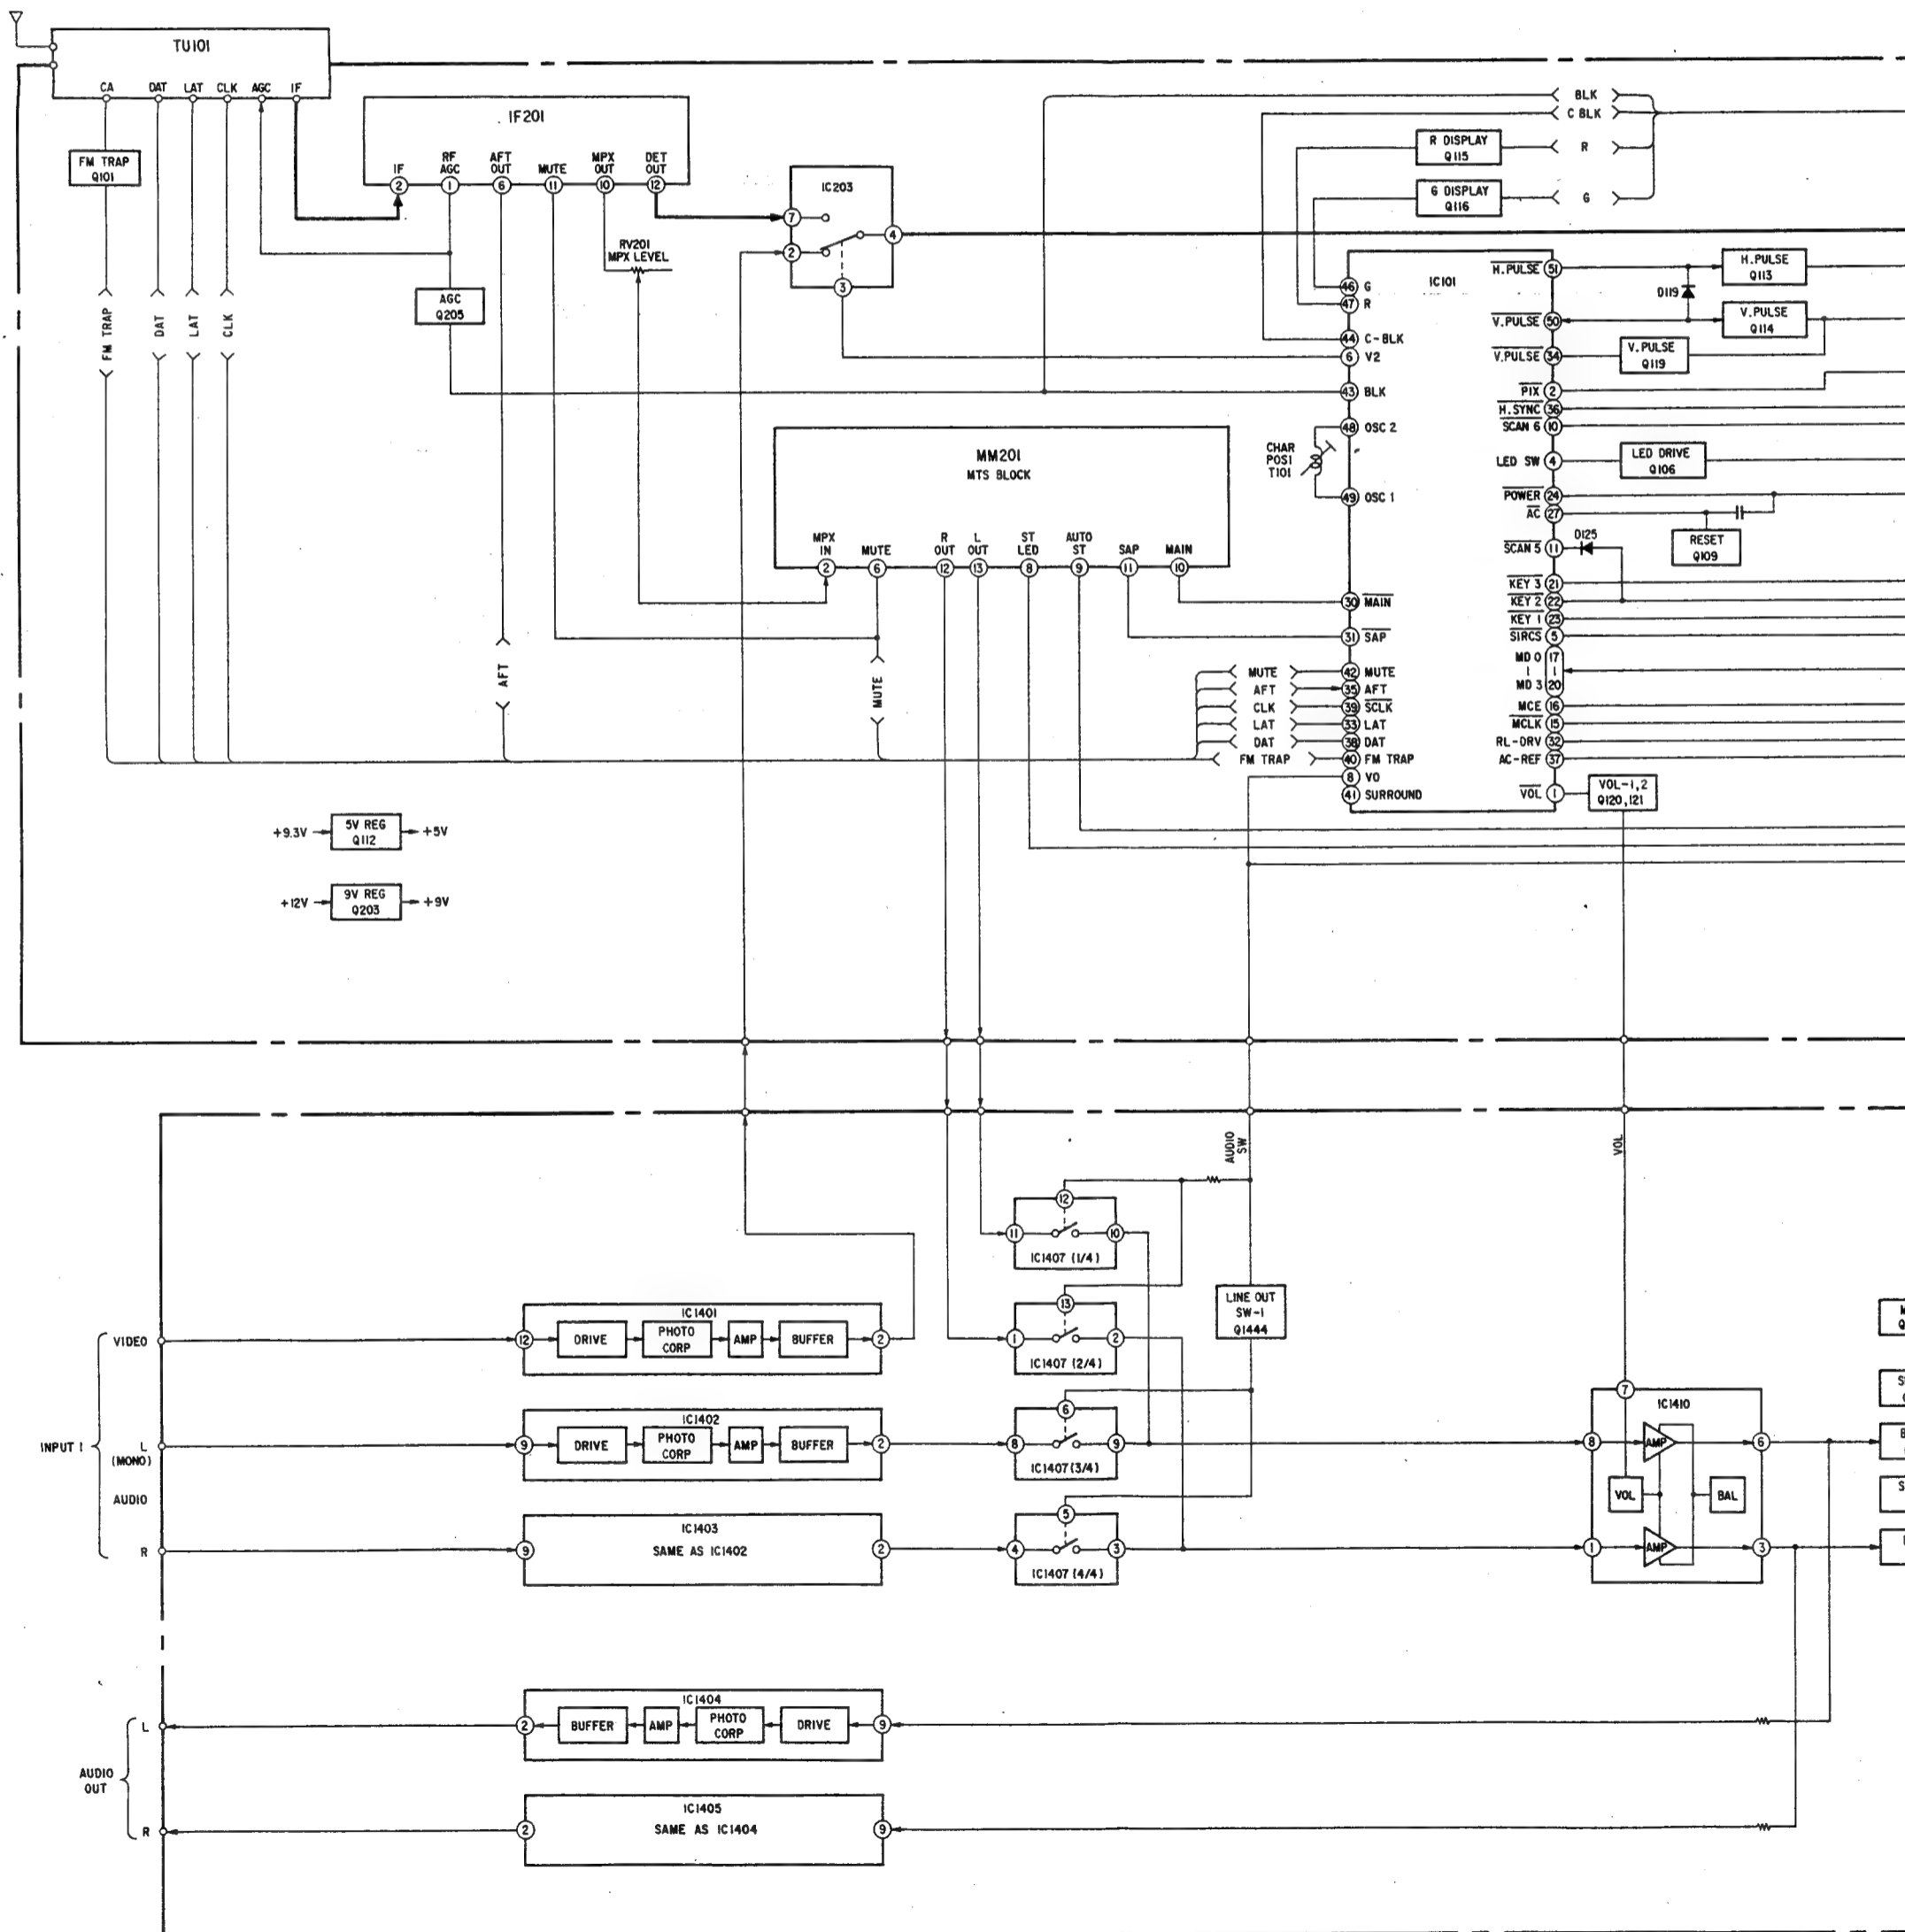

Regarding components of ※R551 (H.SIZE).

DY, C563, C565, R551, R554, R578, T504, RV506

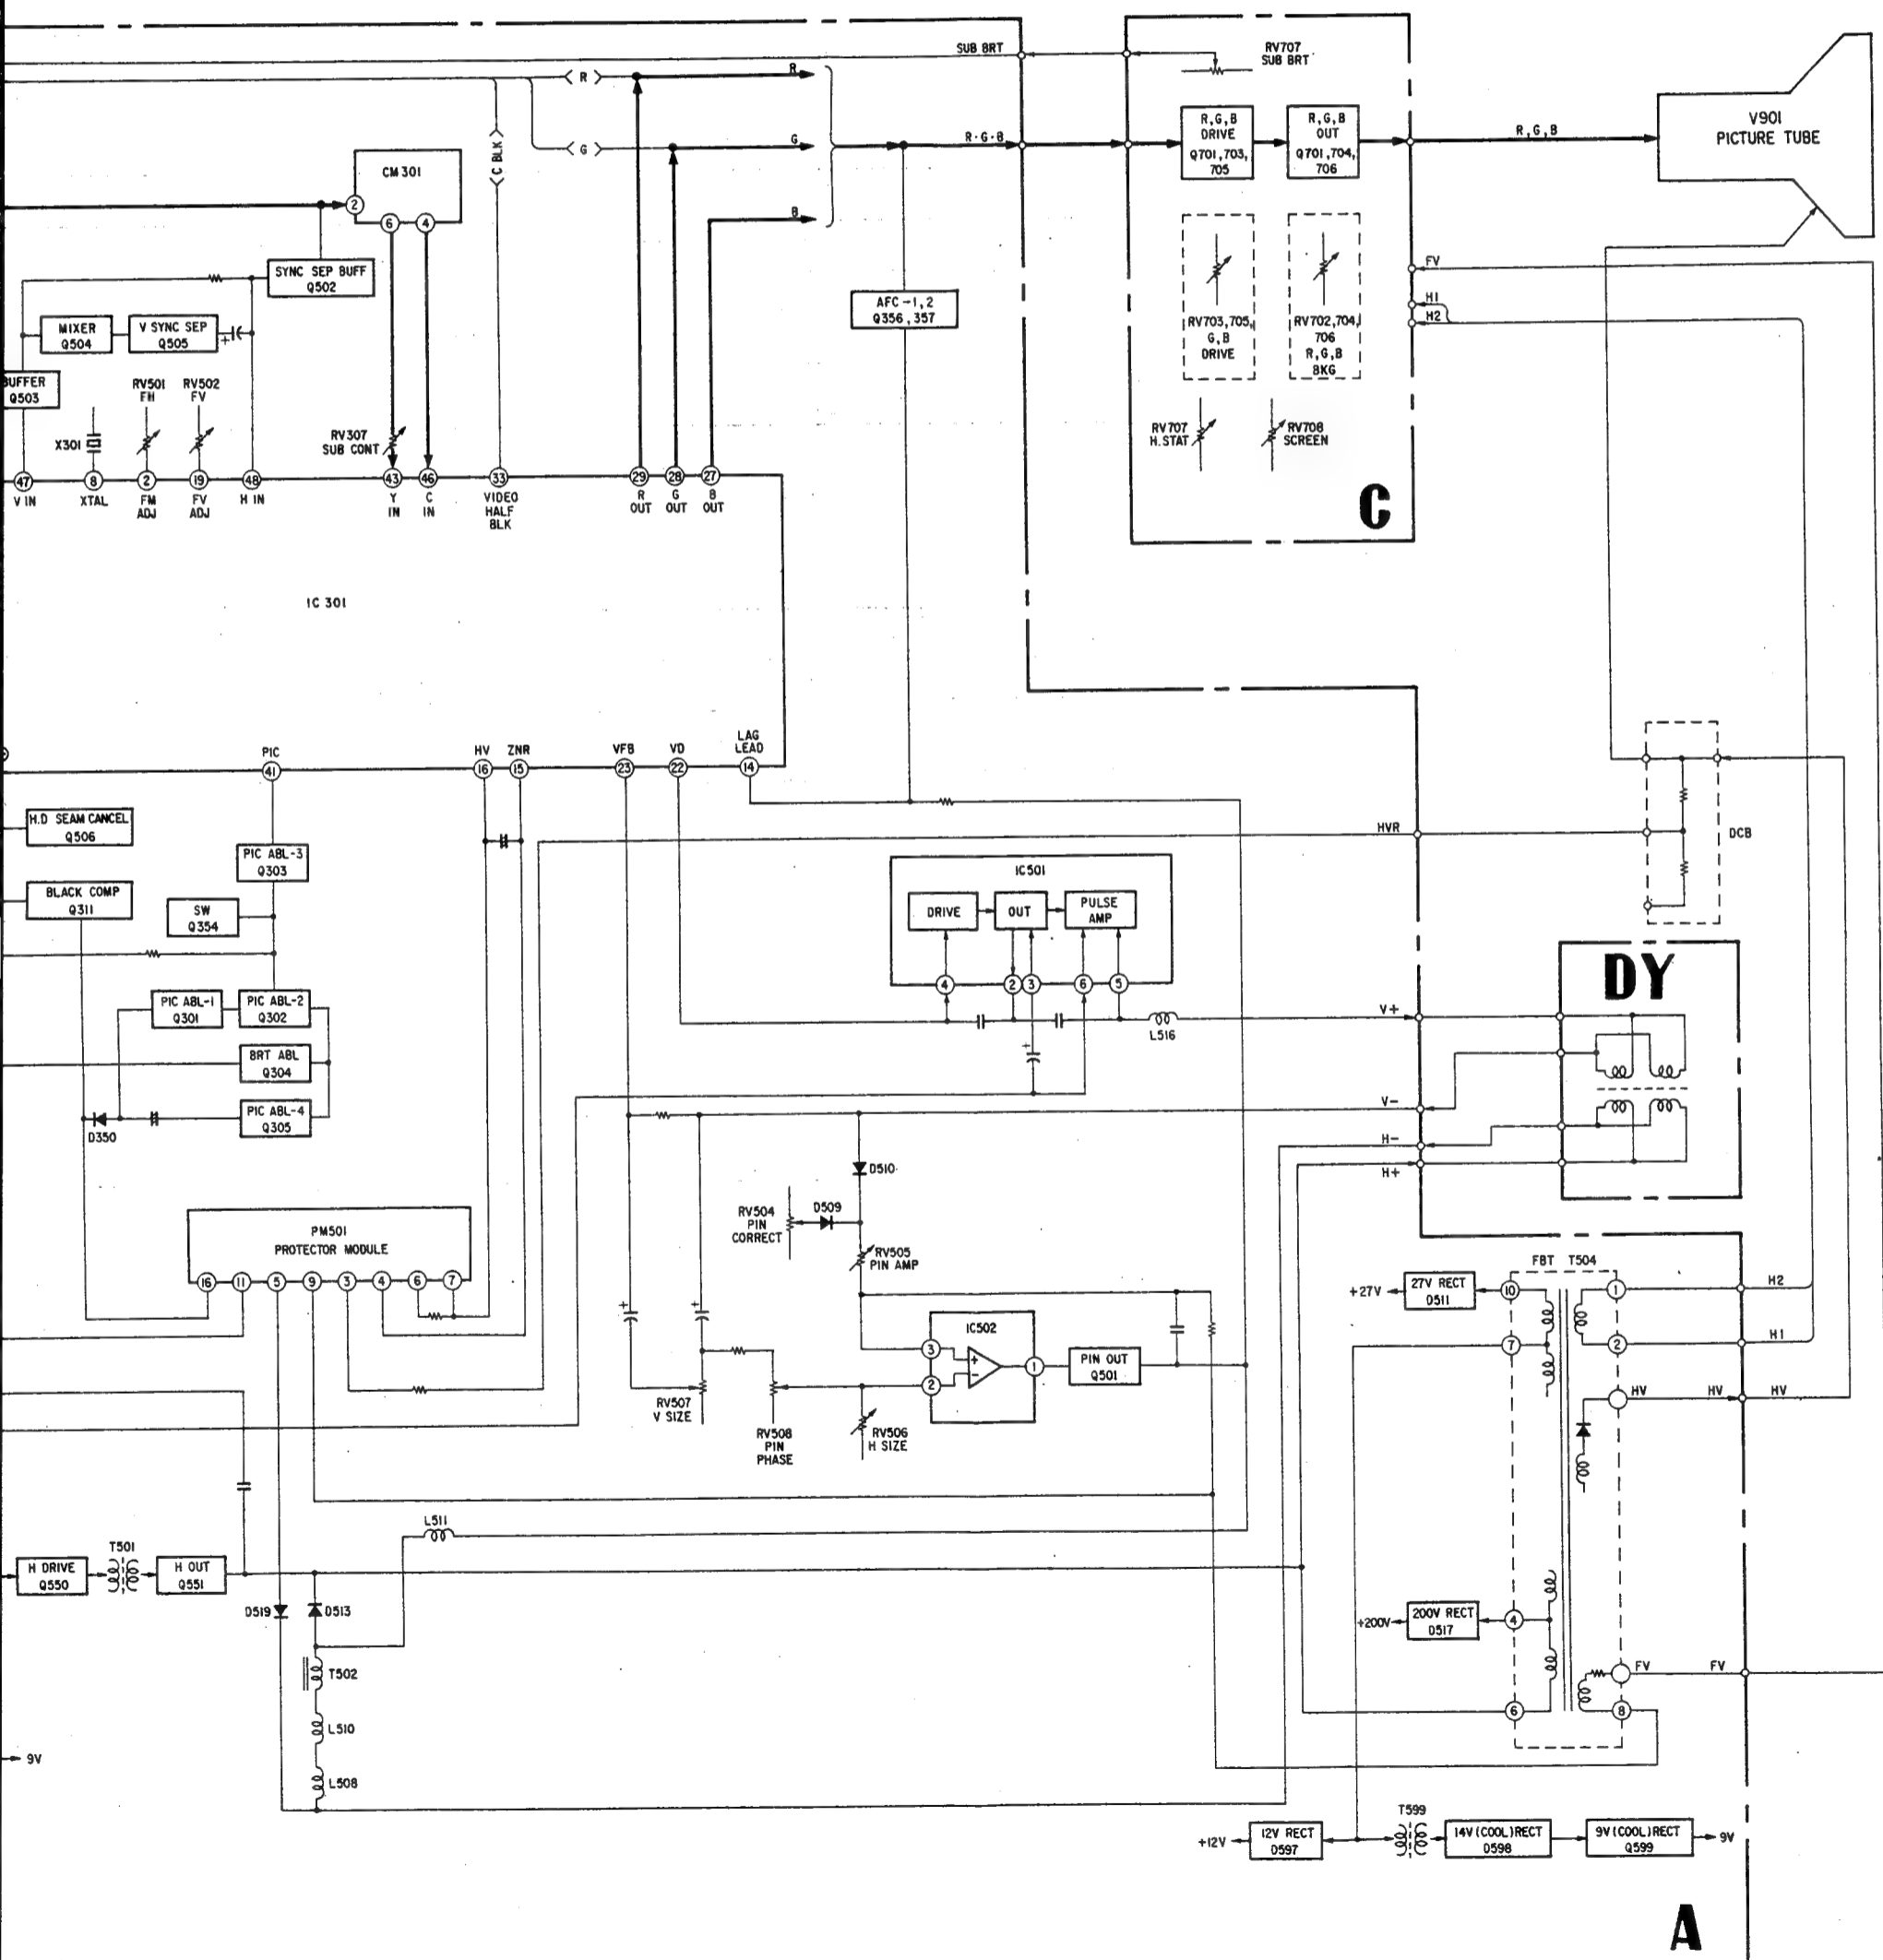

1. Turn the POWER switch ON, and receive monoscope signal.
2. Set the PICTURE control in to 80 % and the BRIGHT control to center click position.
3. Confirm that the H.SIZE at minimum should not exceed 16.4 frames by adjusting RV506 (H.SIZE).

SECTION 6 DIAGRAMS

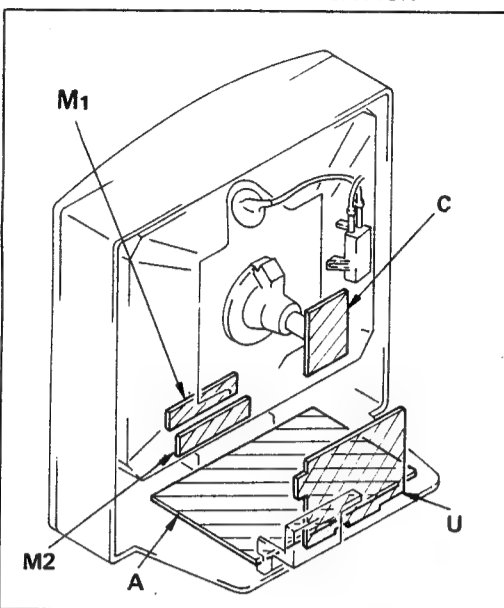

6-1 BLOCK DIAGRAM

6-2. CIRCUIT BOARDS LOCATION

Note:

- All capacitors are in μF unless otherwise noted. pF : μF 50WV or less are not indicated except for electrolytics.
- All resistors are in ohms.
- Δ : internal component.
- \square : nonflammable resistor.
- \square : adjustment for repair.
- Indication of resistance, which does not have one for rating electrical power is as follows.

Pitch: 5 mm
Rating electrical power: 1/4 W

Reference information

RESISTOR	: RN	METAL FILM
	: RC	SOLID
	: FPRD	NONFLAMMABLE CARBON
	: FUSE	NONFLAMMABLE FUSIBLE
	: RS	NONFLAMMABLE WIREWOUND
	: RB	NONFLAMMABLE CEMENT
COIL	: LF-8L	MICRO INDUCTOR
CAPACITOR	: TA	TANTALUM
	: PS	STYROL
	: PP	POLYPROPYLENE
	: PT	MYLAR
	: MPS	METALIZED POLYESTER
	: MPP	METALIZED POLYPROPYLENE
	: ALB	BIPOLAR
	: ALT	HIGH TEMPERATURE
	: ALR	HIGH RIPPLE

- All variable and adjustable resistors have characteristic curve B, unless otherwise noted.
- The components identified by \square in this basic schematic diagram have been carefully factory-selected for each set in order to satisfy regulations regarding X-ray radiation. Should replacement be required, replace only with the value originally used.
- When replacing components identified by \square , make the necessary adjustments indicated. If results do not meet the specified value, change the component identified by \square and repeat the adjustment until the specified value is achieved. (Refer to R381 adjustment on Page 15, 16.) When replacing the part in below table, be sure to perform the related adjustment.

Part replaced (\square)	Adjustment (\square)
IC301, PM501, R512, R381, R382, R378, R379, R344	R381 (HOLD DOWN)

- Voltages are dc with respect to ground unless otherwise noted.
- All voltages are in V.
- Readings are taken with a 10 M Ω digital multimeter.
- Readings are taken with a color-bar signal input.
- Voltage variations may be noted due to normal production tolerances.
- --- : B+ bus.
- The hold down check point is pin 4 of A-14 connector.
- --- : signal path.

Note: The components identified by shading and mark Δ are critical for safety. Replace only with part number specified.

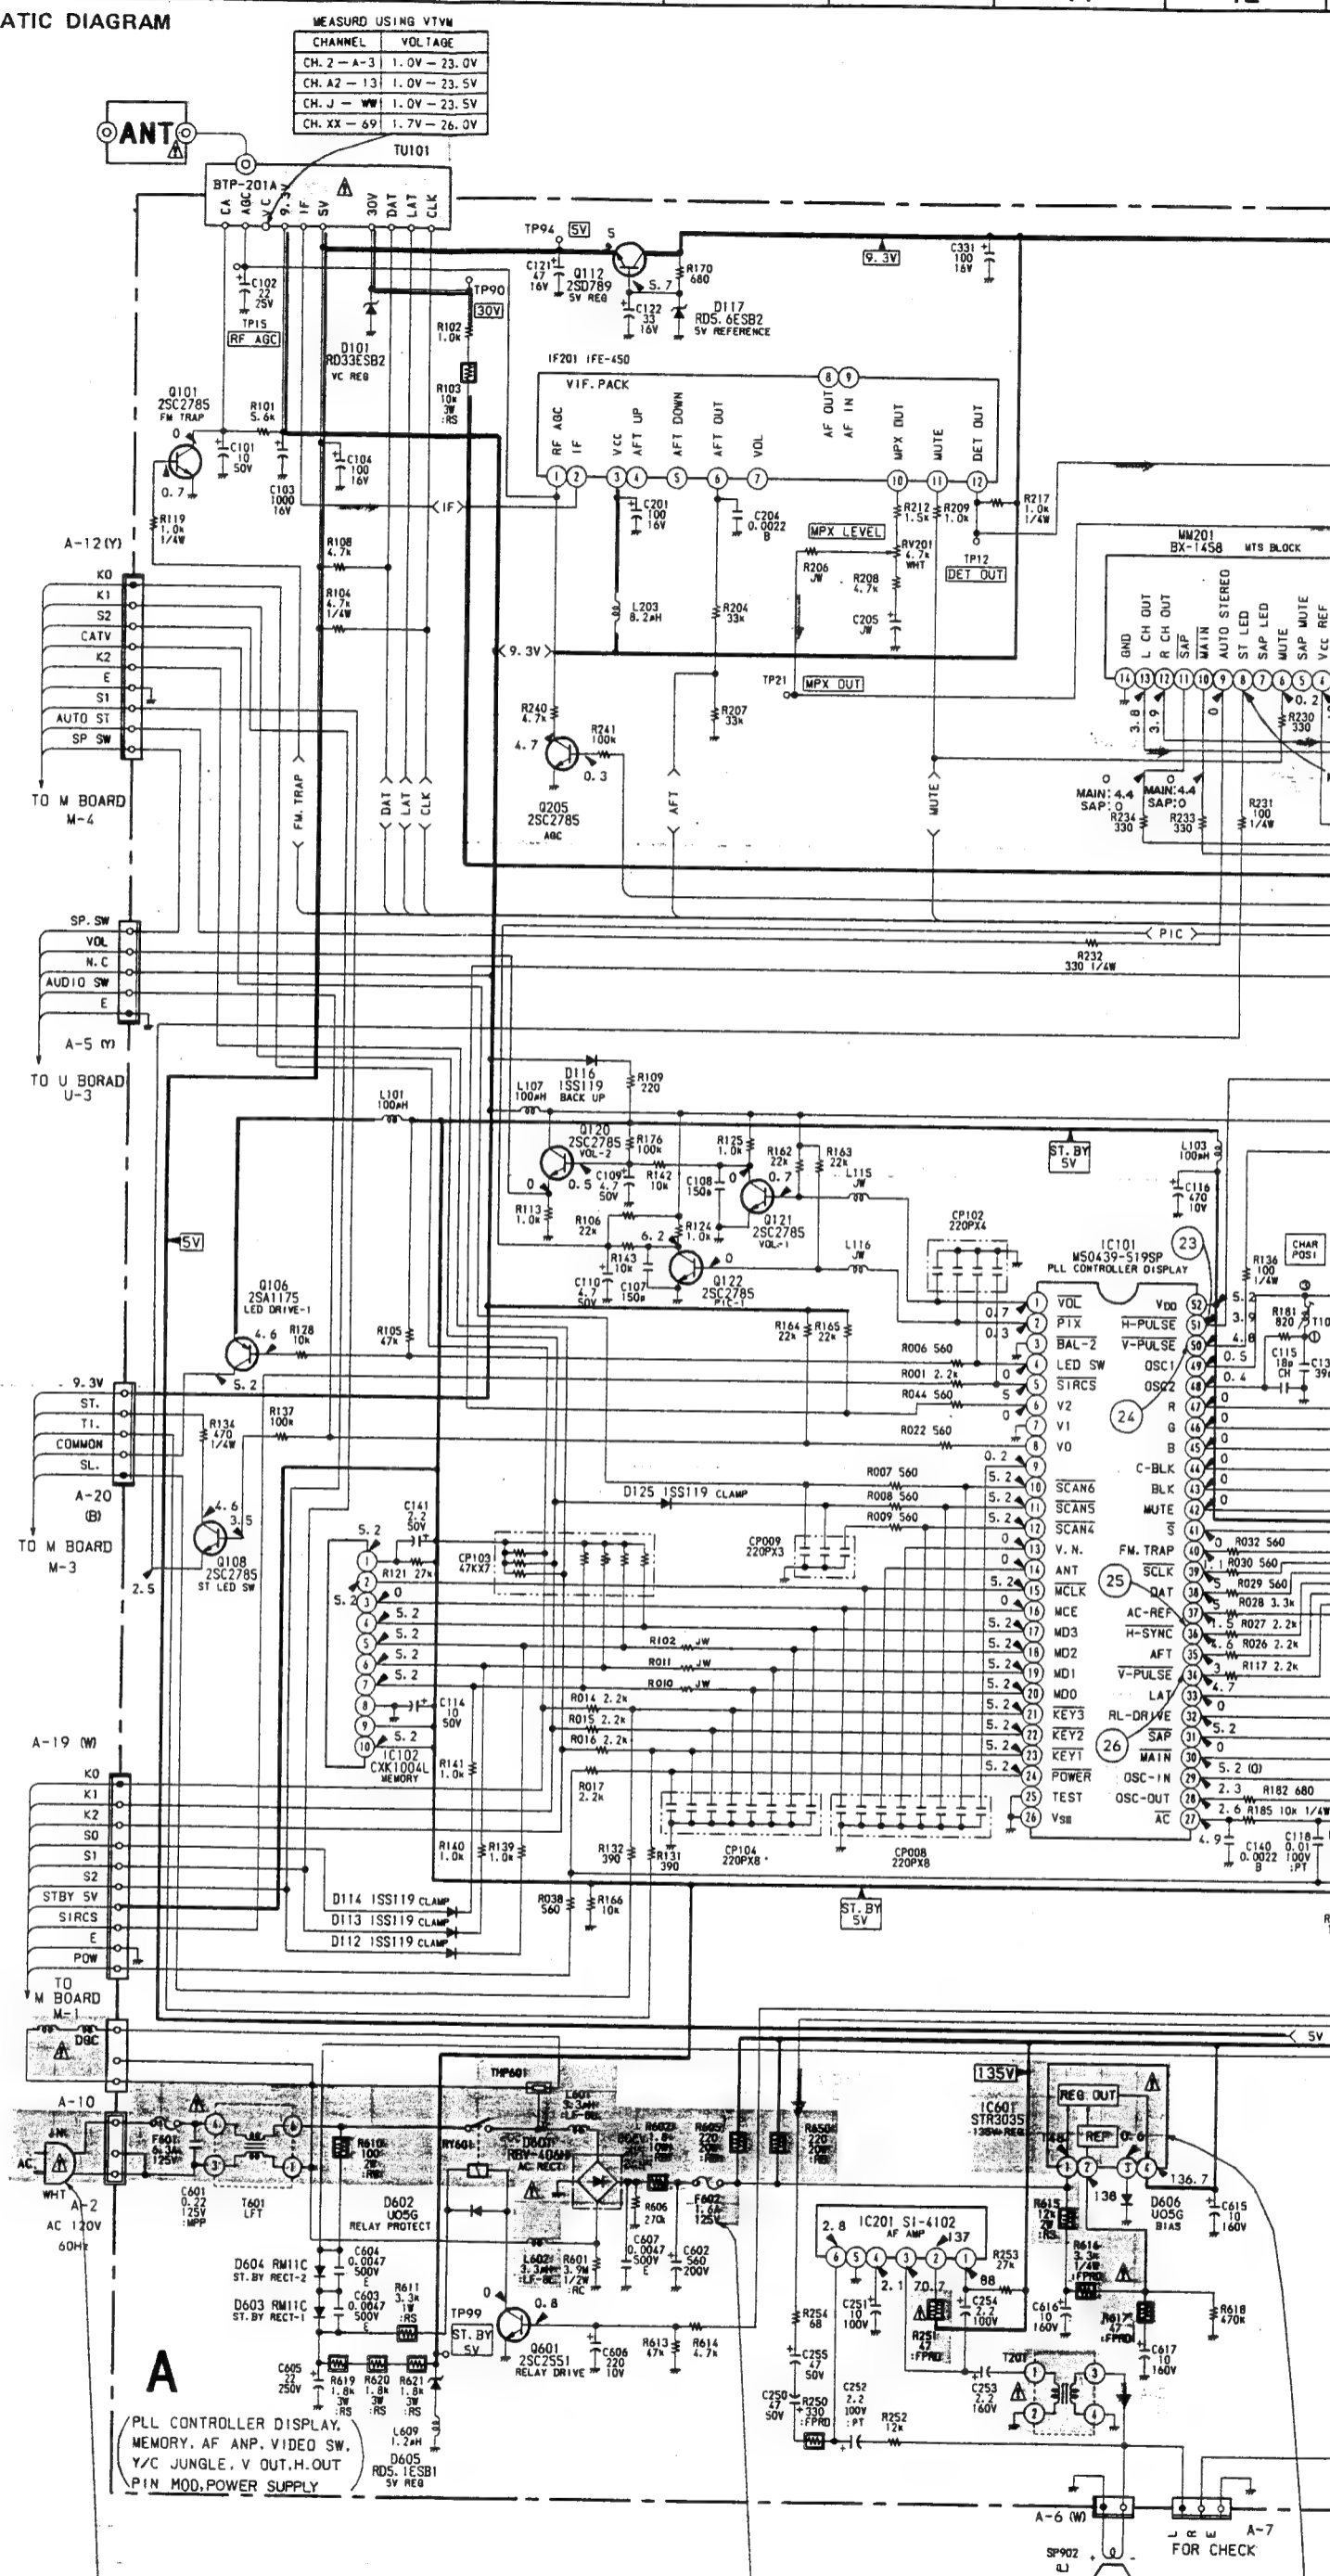

Note: Les composants identifiés par un trame et une marque Δ sont critiques pour la sécurité. Ne les remplacer que par une pièce portant le numéro spécifié.

- Pin assignment of connectors in as follows.

wider than others

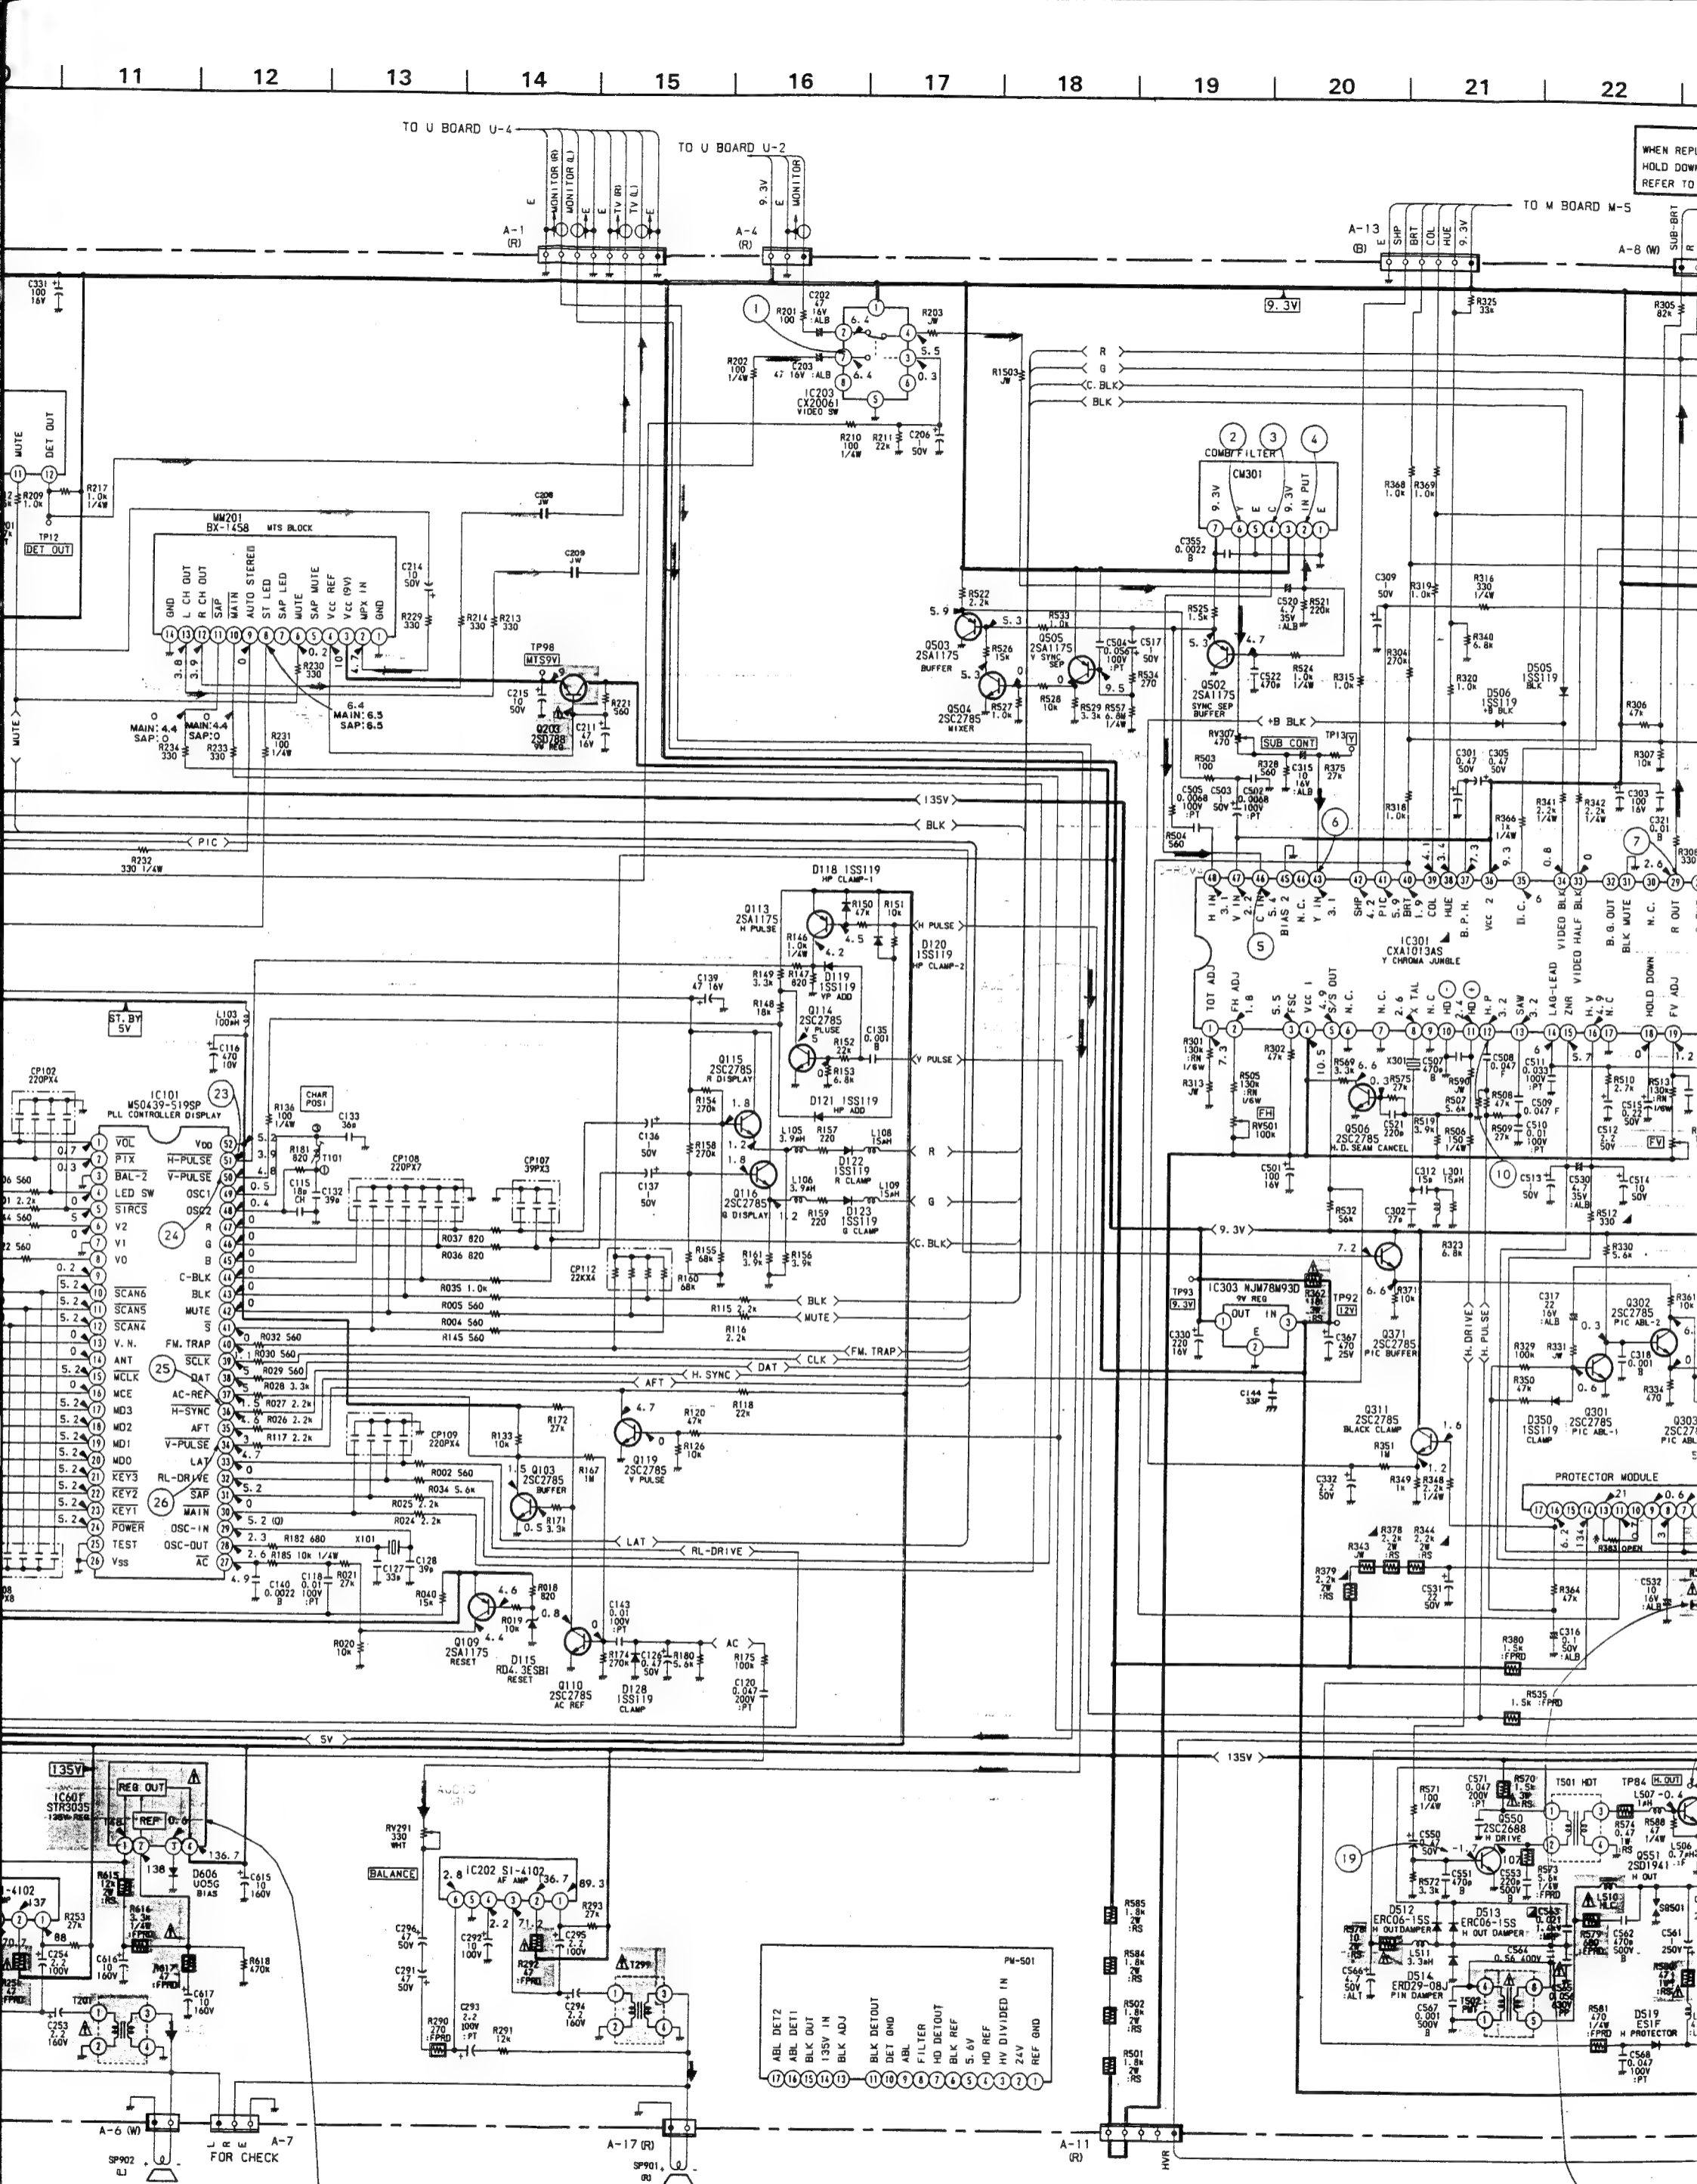

6-3. SCHEMATIC DIAGRAM

CAUTION
THIS SET IS EQUIPPED WITH A POLARIZED AC POWER CORD. PLUG ONE BLADE OF THE PLUG IS WIDER THAN THE OTHER. WHEN REPLACING THE AC POWER CORD, BE SURE TO CONNECT IT WITH SPECIFIED PART NUMBER AS SHOWN IN THIS DIAGRAM.

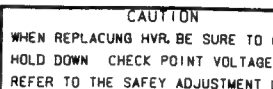

CAUTION
WHEN TAKING A BROKEN FUSE (F602) OFF, DISCHARGE ACROSS C602 TO AVOID SHOCK HAZARD.

CAUTION
WHEN REPLACING IC601, BE SURE TO POINT VOLTAGE VALUE (TP ADJUSTMENT LTEM.

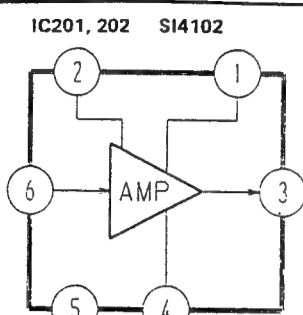

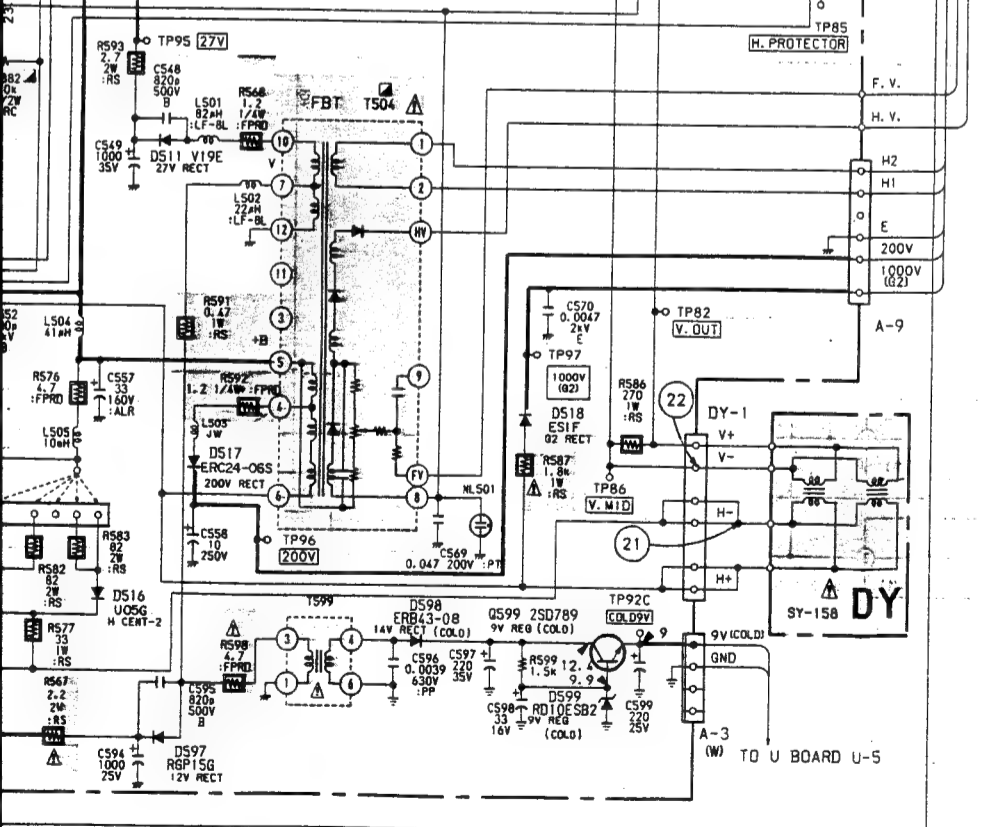

CAUTION
WHEN REPLACING IC601, BE SURE TO CHECK THE TEST
POINT VOLTAGE VALUE (TP91). REFER TO THE SAFETY.

AM AMP, VIDEO SW, Y/C JUNGLE,
V OUT, PIN MDD, H OUT POWER SUPPLY

This is a detailed electronic circuit board diagram for a Sony television set, model 1-625-006-22. The diagram is organized with a grid system (A-J vertically, 1-16 horizontally) for component location.

Key Functional Sections:

- H-PROT**: Horizontal protection circuit at the top center.
- Y.C.U.**: Vertical Chrominance Unit at the top right.
- COMB FILTER**: Comb filter section in the middle right.
- AUDIO OUT**: Audio output stage below the comb filter.
- VIF SIF**: Video Intermediate Frequency / Sound Intermediate Frequency section on the far right.
- AC RECT**: AC Rectifier section at the bottom right.
- POWER-SUPPLY REG**: Power supply regulation section at the very bottom.
- H.DEFLECTION**: Horizontal deflection circuit at the bottom left.
- PIN CORRECTION**: Pin correction circuit in the lower middle.

The diagram includes numerous components labeled with their designations: resistors (R), capacitors (C), diodes (D), transistors (Q), and integrated circuits (IC). Specific ICs include the T993 (27V) and F602 (125V 1.6A).

C [R·G·B OUT]

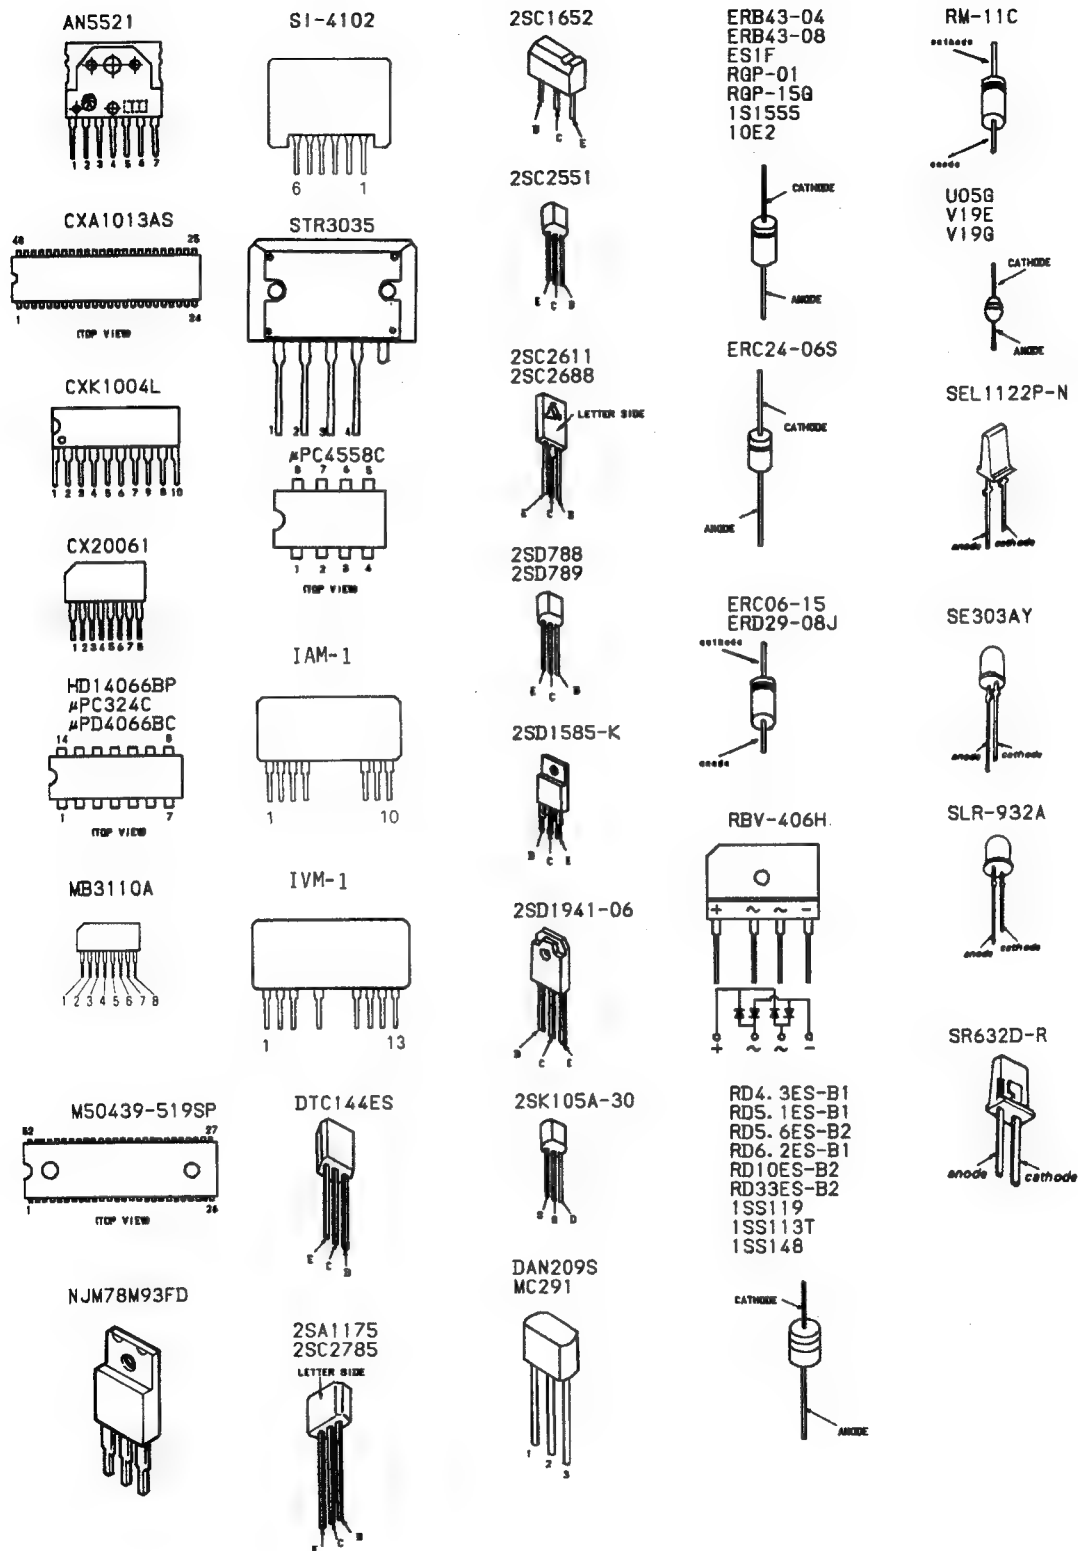

The circuit indicated as left contains high voltage of over 600 Vp-p. Care must be paid to prevent an electric shock in inspection or repairing.

6-5. SEMICONDUCTORS

SECTION 7

EXPLODED VIEWS

NOTE:

- Items with no part number and no description are not stocked because they are seldom required for routine service.
- The construction parts of an assembled part are indicated with a collation number in the remark column.

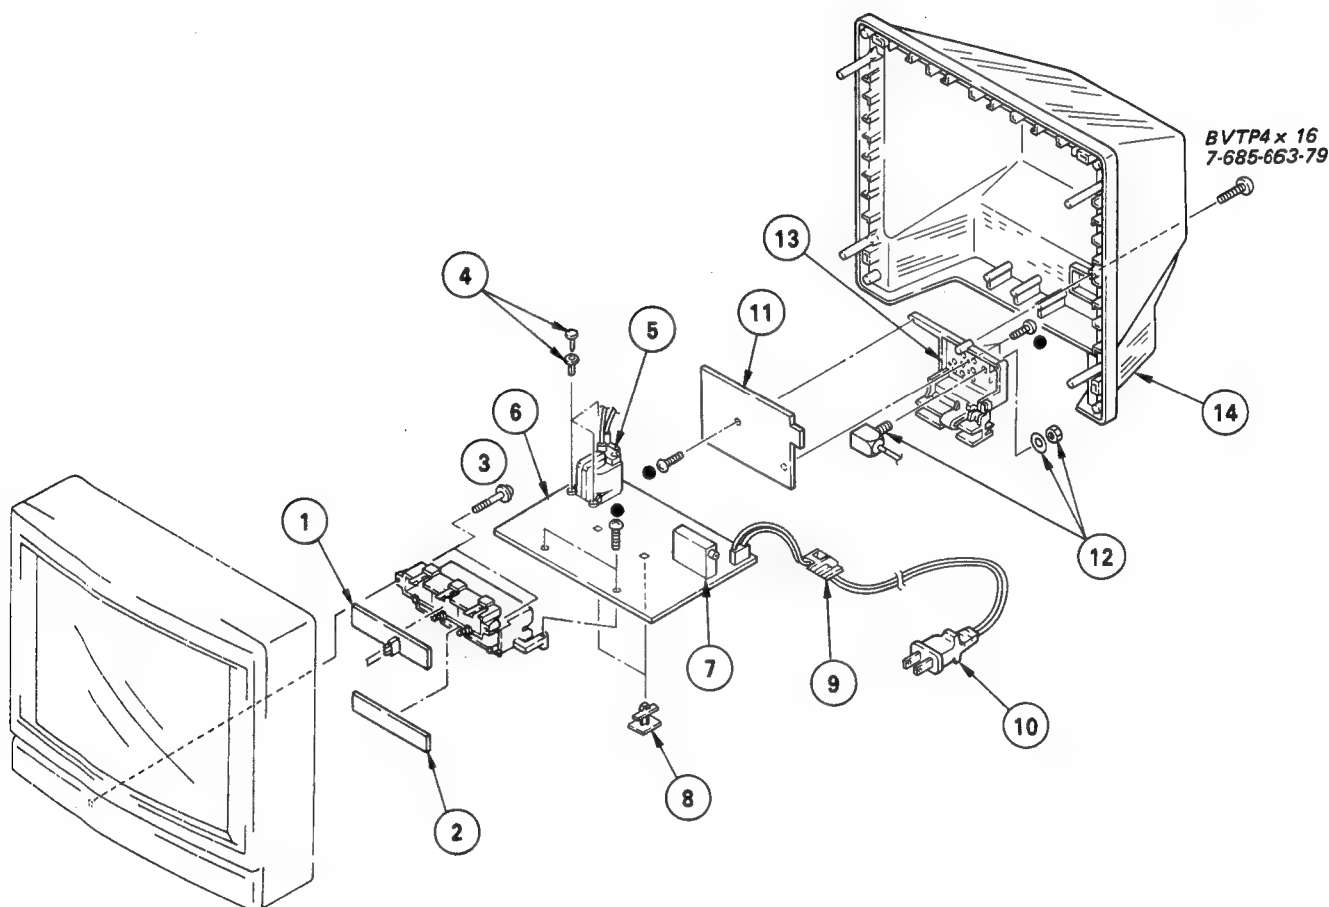

- Items marked "★" are not stocked since they are seldom required for routine service. Some delay should be anticipated when ordering these items.

The components identified by shading and mark Δ are critical for safety. Replace only with part number specified.

Les composants identifiés par une trame et une marque Δ sont critiques pour la sécurité. Ne les remplacer que par une pièce portant le numéro spécifié.

A

The components identified by shading and mark **A** are critical for safety.
Replace only with part number specified.

Les composants identifiés par une trame et une marque  sont critiques pour la sécurité. Ne les remplacer que par une pièce portant le numéro spécifié.

- Items marked " * " are not stocked since they are seldom required for routine service. Some delay should be anticipated when ordering these items.
- All variable and adjustable resistors have characteristic curve B, unless otherwise noted.

- All resistors are in ohms
- F : nonflammable

When indicating parts by reference number, please include the board name.

COILS

• MF : μF , PF : μF • MMH : mH, UH : μH

- The components identified by  in this manual have been carefully factory-selected for each set in order to satisfy regulations regarding X-ray radiation. Should replacement be required, replace only with the value originally used.
-  : Selected to yield optimum performance.

— 41 —

The components identified by shading and mark **A** are critical for safety.
Replace only with part number specified.

Les composants identifiés par une trame et une marque Δ sont critiques pour la sécurité. Ne les remplacer que par une pièce portant le numéro spécifié.

The components identified by shading and mark Δ are critical for safety. Replace only with part number specified.

- The components identified by Δ in this manual have been carefully factory-selected for each set in order to satisfy regulations regarding X-ray radiation. Should replacement be required, replace only with the value originally used.
